

# NEW Green Light® Integrated Lighting System

An innovative lighting controller designed for easy, fully integrated installations in classrooms, conference rooms and offices. And big energy savings.

## Saves energy and increases sustainability

- + Advanced RMS Power Metering
- + Track real time energy usage of each load
- + Contributes directly to LEED points
- + Integrated switching and 0-10Vdc dimming
- + Occupancy sensing and daylight harvesting

## Future-proof your lighting design

- + Allows for future proofing of the room. Starts with a stand alone solution and can be expanded
- + Start small, then scale to multiple rooms or entire building
- + Complete built-in networking support

## Easy installation

- + No programming required in applications up to 4 rooms
- + Surface-mount compact enclosure installs cleanly in tight places including plenum ceilings
- + Built-in Web browser for remote control
- + Compatible with Crestron keypads and touchpanels
- + Easy integration with HVAC systems and Fusion Viridian™ lighting management software for high performance environmental system control
