

# The Fuse is Lit

Don't let analog blow up in your face

Be prepared with Crestron DigitalMedia™

Analog audio and video is being killed. By the end of the year component outputs will only support standard definition signals, and by 2013 component outputs and analog video will be gone forever. Crestron DigitalMedia™ manages, distributes and controls all analog and uncompressed 1080p signals, including HDMI/DVI, DisplayPort, Ethernet and USB long distance over just one copper wire or fiber. DM is the only complete source-to-display solution for the digital age.
