

Saving energy takes more than a dimmer

Raising the blinds and turning off the lights doesn't save energy if the room is hot and the air conditioning runs all day. Or, when a meeting ends and everyone leaves the room, but the projector and other AV devices stay on. The dimmer doesn't know about room schedules, temperature and all the other AV equipment that consumes electricity and drives energy costs through the roof.

Only Crestron Green Light™ provides commercial lighting and intelligent building management solutions to deliver real energy savings. Crestron Green Light enables you to both centrally and locally monitor every circuit using award-winning software and touchpanels. All building technology and environmental systems, including HVAC, sprinklers and security, can also be connected through and managed by the Crestron control system, to maximise efficiency. So, offer your clients a true energy solution. Crestron Green Light delivers up to 30% real cost savings in the first year alone. Now that's a green solution you can bank on!
