

Easy, affordable upgrade to digital

No new wires to pull or connectors to terminate

Today, everyone is looking for a pathway into the digital age. Consumers want to watch Blu-ray movies and streaming HD content. As the sun sets on analog, only Crestron DigitalMedia™ enables you to experience your favorite TV shows, movies, video games and sporting events in true 1080p throughout the house. Simply swap out your existing analog switchers and replace them with DM™ — no new wires or terminations — and you're instantly in the digital world. Crestron DigitalMedia takes in all analog and digital AV signals, and transmits those signals hundreds of feet over a single, standard CAT5e cable. Crestron DigitalMedia uses the same wire that's already in many homes. So, all your PVID systems are already DM compatible and digital ready.

Ask about our new analog to digital trade-in program today.
