

Keypads overview

Crestron's comprehensive line of wall mount keypads takes the world's most basic control device – the pushbutton – to the highest levels of function and style. Intuitive and reliable, sometimes a pushbutton keypad simply offers the right control solution. Keypads present a practical, versatile and cost-effective approach to controlling AV devices, lighting, and so much more. Whatever the application, Crestron offers a complete selection of eye-pleasing keypads in a variety of designer finishes and colors.

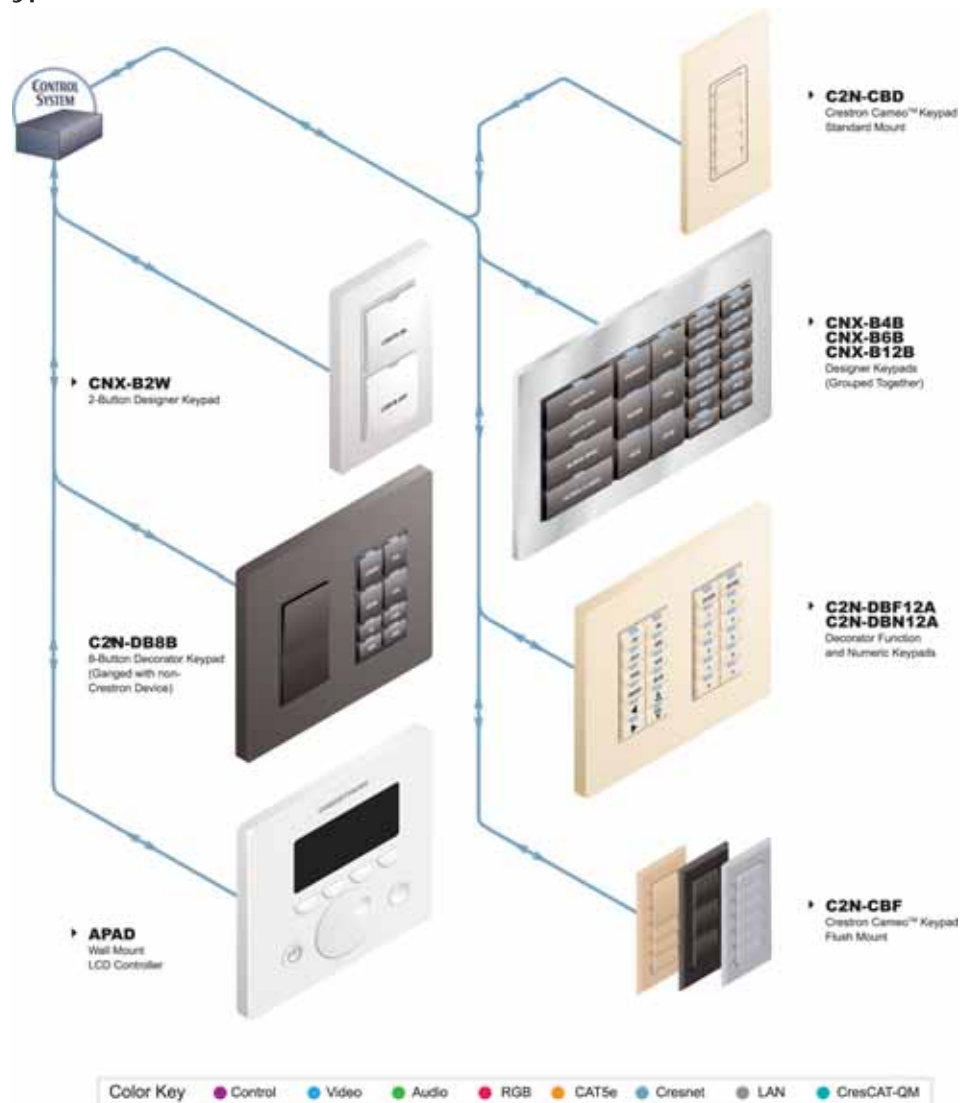

Crestron's **Cameo Keypads** represent a truly unique solution in customizable keypad control, offering extensive flexibility in a stylish design that occupies just 1/3 the space of a typical keypad. The **C2N-DB Decorator Series** is designed to allow installation in perfect harmony with non-Crestron devices using readily available Decora® style faceplates. The **CNX-B Designer Series** embodies true

elegance offering a wide selection of keypads with extra large backlit buttons and designer faceplates. All Crestron keypads feature engravable button caps and LED light pipe feedback indicators.

The new **APAD Wall Mount LCD Controller** provides an elegant, versatile, and cost-effective alternative to touchpanels or pushbutton keypads. Its LCD graphical display supports dynamic scrolling text, icons, and bargraphs, presenting the user with a large amount of information in a small space. A spin of its nav wheel intuitively adjusts the music volume and scrolls through radio channels, playlists, and song titles.

For the ultimate control interface, nothing beats a Crestron touchpanel. But keypads provide the solutions to fill the spaces between, offering powerful control potential in an intuitive and cost-effective package.
