Important Safety Instructions

• Read these instructions.
• Keep these instructions.
• Heed all warnings.
• Follow all instructions.
• Do not use this apparatus near water.
• Clean only with dry cloth.
• Do not block any ventilation openings. Install in accordance with the manufacturer’s instructions.
• Do not install near any heat sources such as radiators, heat registers, stoves, or other apparatus (including amplifiers) that produce heat.
• Do not defeat the safety purpose of the polarized or grounding-type plug. A polarized plug has two blades with one wider than the other. A grounding-type plug has two blades and a third grounding prong. The wide blade or the third prong are provided for your safety. If the provided plug does not fit into your outlet, consult an electrician for replacement of the obsolete outlet.
• Protect the power cord from being walked on or pinched particularly at plugs, convenience receptacles, and the point where they exit from the apparatus.
• Only use attachments/accessories specified by the manufacturer.
• Unplug this apparatus during lightning storms or when unused for long periods of time.
• Refer all servicing to qualified service personnel. Servicing is required when the apparatus has been damaged in any way, such as power-supply cord or plug is damaged, liquid has been spilled or objects have fallen into the apparatus, the apparatus has been exposed to rain or moisture, does not operate normally, or has been dropped.
• Disconnect power prior to connecting or disconnecting equipment.
• Do not install in direct sunlight.
• The apparatus must be installed in a way that the power cord can be removed either from the wall outlet or from the device itself in order to disconnect the mains power.
• Prevent foreign objects from entering the device.

WARNING:

TO REDUCE THE RISK OF FIRE OR ELECTRIC SHOCK, DO NOT EXPOSE THIS APPARATUS TO RAIN OR MOISTURE. THE APPARATUS SHALL NOT BE EXPOSED TO DRIPPING OR SPLASHING. OBJECTS FILLED WITH LIQUIDS, SUCH AS VASES, SHOULD NOT BE PLACED ON THE APPARATUS.

WARNING:

TO PREVENT ELECTRIC SHOCK, DO NOT REMOVE COVER. THERE ARE NO USER SERVICEABLE PARTS INSIDE. ONLY QUALIFIED SERVICE PERSONNEL SHOULD PERFORM SERVICE.

The lightning flash with arrowhead symbol, within an equilateral triangle, is intended to alert the user to the presence of uninsulated “dangerous voltage” within the product’s enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

The exclamation point within an equilateral triangle is intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the appliance.

WARNING:

THIS IS AN APPARATUS WITH CLASS I CONSTRUCTION. IT SHALL BE CONNECTED TO AN ELECTRICAL OUTLET WITH AN EARTHING GROUND TERMINAL.

IMPORTANT:

The MPS-100 can be used with Class 2 output wiring.

Introduction

Features and Functions

- Multimedia system switcher and control system
- Out-of-the-box switching and audio control
- Two video/HDTV and three RGB/computer inputs
- Built-in input signal sensing | auto-switching capable
- Separate display and touchpanel preview outputs
- QuickMedia™ and Crestron Home® CAT5 AV connectivity
- Five balanced stereo audio inputs | Built-in 40 watt amplifier
- 8 ohm stereo and 70/100V mono versions available
- 2-Series control engine | e-Control®2 Web server
- 10/100 Ethernet | RoomView® and SNMP support
- Two RS-232, four IR, four digital in, & four relay control ports
- Front panel setup and control | Backlit LCD display
- Keypad, touchpanel, and wireless control options
- Internal power supply | two-space rack-mountable

The Multimedia Presentation System 100 (MPS-100) is a complete presentation control and signal routing solution for boardrooms and classrooms. Integrating a control system, multimedia switcher, audio controls and amplifier into a single two-space rack mount package, the MPS-100 eliminates the need for separate components without forfeiting performance or flexibility.

System Switcher

The MPS-100 provides high-performance switching of two video and three RGB computer sources to a single projector or plasma display. Composite, S-video, component and RGBHV signals can be routed to the appropriate inputs on the display device, with control of the display provided via Ethernet, RS-232 or IR. Input signal sensing is provided on every video and RGB input to enable auto-switching functionality and provide device power status information to the control system. Selectable sync impedance on each RGB input helps accommodate cable runs of varying lengths.
**Touchpanel Output**

A second discrete output is provided on the MPS-100 to feed a preview signal to the system touchpanel or other monitor. This output is controlled separately from the main display output, allowing a different source to be viewed on the touchpanel. The touchpanel connection is facilitated through a choice of QuickMedia (QM) or Crestron Home (CH) CAT5 Balanced Video outputs, simplifying wiring to a wide range of Crestron® touchpanels. The QM output supports high-resolution RGB and HDTV plus audio, while the CH output is limited to standard video and HDTV only (dependent upon the capabilities of the touchpanel). RGBHV inputs are only displayed on the QM output.

**QuickMedia**

The QM touchpanel output can also be used to feed signals straight to the primary display device, providing a very streamlined, low-cost, long-distance wiring solution. Crestron's exclusive QuickMedia transport transmits high-resolution RGB, HD video, and stereo program audio signals up to 450 feet over a single inexpensive CAT5e type cable. Just one CresCAT-QM cable and a QM receiver are all that is required for complete signal routing and device control, eliminating all the bulky, expensive cabling that would otherwise be needed.

**Audio Features**

Five stereo audio inputs accept balanced or unbalanced line-level signals from computers and other program audio sources. To accommodate a wide range of signals, adjustable input compensation is employed to help maintain consistent volume levels when switching between sources.

In addition to volume adjustment, the MPS-100's main program output (PROG OUT) includes adjustable bass, treble, balance, and mute. Professional balanced line level outputs are provided, with mute relays for "thump" protection upon power up. A separate "fixed-level" LINE OUT with electronic mute provides a second set of balanced outputs to feed a recording device, codec, or assistive listening system.

The QM touchpanel output is controlled separately from the other audio outputs, allowing a different program source to be monitored on the touchpanel, or output to other audio equipment by way of an appropriate QM receiver or other QuickMedia device.

**Built-in Amplifier**

A 40-watt amplifier (20 watts x2) is built into the MPS-100, with three models available offering the choice of 8-ohm stereo, 70V mono (MPS-100-70V), or 100V mono (MPS-100-100V) outputs. The term “MPS-100” is used throughout this guide to denote all models. For larger rooms requiring more power, the MPS-100 supports plug-and-play compatibility with Crestron's QM-Series amplifiers.

**Front Panel Control**

Out of the box, the MPS-100 front panel supports easy pushbutton routing of input sources to each of the outputs, and audio volume adjustment using the volume control knob. Dedicated buttons and indicators are also provided for separate control of system power and projector power. In addition, five preset buttons are included for custom functions such as lowering a projection screen, closing blinds, or selecting a lighting preset.

The front panel label strips are easily customized using Crestron Engraver software or standard 3/8” tape labels, allowing for the clear designation of each input, output, and preset button. When selected, these functions will also appear on the LCD.
display as generic names (Input 1, 2…), or as custom names (DVD, Podium PC, Screen Up, etc.) which are easily entered using MediaManager Wizard software.

Easy setup of the MPS-100 is facilitated through the LCD display without necessitating a computer. Together with four softkey buttons, four menu navigation buttons and the volume knob, the LCD enables configuration of IP network, audio, and other system settings. For security, the front panel controls can be password protected or locked out.

2-Series Control System

Integrated into the MPS-100 is a Crestron 2-Series Ethernet control system complete with Crestron e-Control 2 Web server and a host of RS-232, IR, digital input and relay control ports for integration with third-party equipment. A basic AV presentation room with projector, screen, keypad or small touchpanel, and wireless remote control can easily be set up in minutes using the MediaManager Wizard software. Or, a fully custom system can be programmed using SystemBuilder™ or SIMPL™ Windows® software. Either way, the MPS-100 works with Crestron's RoomView Help Desk software, the industry's most comprehensive facility-wide asset management solution.

Room Control Options

Without requiring any programming, the MPS-100 can be controlled simply using Crestron's APAD LCD Controller or a selection of keypads such as the C2N-DB12, CNX-B12, AND C2N-FTB. With custom programming, Crestron's complete line of Isys® touchpanels and MediaManager FlipTops are supported. Equipped with an optional CNXRMIRD IR receiver, the MPS-100 allows any Crestron IR wireless touchpanel or third-party universal remote to be used for a low-cost wireless control solution. Or, adding an RF wireless gateway, infiNET™, or WiFi wireless LAN connection enables use of a wide range of one-way and two-way RF wireless handheld remotes and touchpanels.
Applications

The following diagram shows an MPS-100 in a lecture hall application.

MPS-100 in a Lecture Hall Application

For more information on this and other QM applications, refer to the latest revision of the Crestron MediaManager Applications Guide (Doc. 6244), which is available from the Crestron website (http://www.crestron.com/manuals).
Internal Block Diagram

The following diagrams represent the video and audio switching abilities of the MPS-100. For more information refer to “Configuration and Operation” on page 32.

Video Block Diagram of the MPS-100

The signal type routed to OUT 1 is the same as the input signal type. For example, an S-video input signal will appear on the S-video output terminals when the signal is routed to OUT 1. The MPS-100 does not convert input signal formats.
Specifications

Specifications for the MPS-100 are listed in the following table.

1. Interface connectors for **NET**, **INFRARED-Serial**, **INPUT**, **RELAY OUTPUT**, and **AUDIO** ports are provided with the unit.
2. Transmission levels on the infrared – serial output connectors are in the 0 to +5 VDC range, which may not be compatible with all RS-232 devices.
3. This eight-pin RJ-45 port provides connectivity to a touchpanel with a CH input port or a Crestron device with a CAT5 video input. This port provides component, composite or S-video balanced output over CAT5 wiring. Refer to the following table for connector pinouts.

Industry Compliance

This product is Listed to applicable UL Standards and requirements by Underwriters Laboratories Inc.

![UL (E302724)](image)

As of the date of manufacture the MPS-100 has been tested and found to comply with specifications for CE marking and standards per EMC and Radiocommunications Compliance Labelling.

NOTE: This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.
Setup

Network Wiring
When wiring the network, consider the following:

- Use Crestron Certified Wire.
- Provide sufficient power to the system.

**CAUTION:** Insufficient power can lead to unpredictable results or damage to the equipment. Please use the Crestron Power Calculator to help calculate how much power is needed for the system ([http://www.crestron.com/calculators](http://www.crestron.com/calculators)).

- For larger networks, use a Cresnet Hub/Repeater (CNXHUB) to maintain signal quality.

For more details, refer to “Check Network Wiring” on page 69.

Ethernet
The MPS-100 also uses high-speed Ethernet for communications between the control system and a device, computer, digital media server and other IP-based devices.

For information on connecting Ethernet devices in a Crestron system, refer to the latest version of the Crestron e-Control® Reference Guide (Doc. 6052).

CAT5 Wiring
Category 5 (CAT5) wiring is a twisted pair cable designed for Ethernet networks. These networks operate at speeds of up to 100 Megabits per second (Mbps) using the 100BaseT standard. Crestron takes advantage of this specification for a variety of video applications.

Crestron recommends using CresCAT, CresCAT-D or CresCAT-Q wiring solutions. The following chart shows the maximum recommended cable lengths for various signal formats.

<table>
<thead>
<tr>
<th>FORMAT</th>
<th>MAXIMUM DISTANCE</th>
</tr>
</thead>
<tbody>
<tr>
<td>Composite</td>
<td>500 feet</td>
</tr>
<tr>
<td>S-Video</td>
<td>500 feet</td>
</tr>
<tr>
<td>Component</td>
<td>500 feet</td>
</tr>
</tbody>
</table>

For more information, refer to the latest version of the Crestron CAT5 Wiring Reference Guide (Doc. 6137).

QuickMedia Wiring
The Crestron QuickMedia cable (sold under the name “CresCAT-QM”) contains one CAT5E cable and one Cresnet cable in Siamese jackets. Installation of any QM device is as simple as installing CresCAT-QM wires from the output of one device to the input of another. Installations are flexible, affordable and fast. For more
information, refer to the latest revision of the Crestron MediaManager Applications Guide (Doc. 6244).

**CresCAT-QM Cable**

![CresCAT-QM Cable Diagram](image)

**NOTE:** Do not untwist the two wires in a single pair for more than 1/3-1/2” (0.84-1.27 cm) when making a connection. The twists are critical to canceling out interference between the wires.

The aggregate cable length of a signal path originating at the MPS-100 and terminating at a QM receiver must not exceed 450 feet (137 meters). Video signals may experience a loss of quality over very long lengths of cable. This phenomenon is due to the added resistance and capacitance of longer cable lengths and is not peculiar to either Crestron and/or QuickMedia systems. To ensure sufficient bandwidth, the maximum aggregate cable length should not exceed 450 feet. The use of lower-resolution signals may allow increased cable length but must be tested by the installer with the sources to be used. The QM pin assignment is based on the EIA/TIA 568B RJ-45 Jack standard.

**NOTE:** When transmitting S-video, luminance uses the green video pathway and chrominance uses the red video pathway. When transmitting composite video, the signal is carried on the blue video pathway.

**NOTE:** When using CresCAT-QM wiring, four additional wires are included for making Cresnet connections.

When connecting multiple QM devices, the route between a QM origination point (transmitter) and a QM endpoint (receiver) cannot have more than two midpoints (e.g. QM-MD7x2 or other QM switchers). Refer to the following diagram when configuring a QM network.

**NOTE:** Use CresCAT-QM to make QM connections. The cumulative skew over the entire length must be less than 22 ns.
Installation

Ventilation

The MPS-100 should be used in a well-ventilated area. The venting holes should not be obstructed under any circumstances. If the MPS-100 is hot to the touch, consider using forced air ventilation and/or incrementing the spacing between units.

To prevent overheating, do not operate this product in an area that exceeds the environmental temperature range listed in the table of specifications. Consideration must be given if installed in a closed or multi-unit rack assembly since the operating ambient temperature of the rack environment may be greater than the room ambient temperature. Contact with thermal insulating materials should be avoided on all sides of the unit.

Rack Mounting

The MPS-100 can be mounted in a rack or stacked with other equipment. Two “ears” are provided with the MPS-100 so that the unit can be rack mounted. These ears must be installed prior to mounting. Complete the following procedure to attach the ears to the unit. The only tool required is a #2 Phillips screwdriver.

WARNING: To prevent bodily injury when mounting or servicing this unit in a rack, take special precautions to ensure that the system remains stable. The following guidelines are provided to ensure your safety:

- When mounting this unit in a partially filled rack, load the rack from the bottom to the top with the heaviest component at the bottom of the rack.
- If the rack is provided with stabilizing devices, install the stabilizers before mounting or servicing the unit in the rack.

NOTE: Reliable earthing of rack-mounted equipment should be maintained. Particular attention should be given to supply connections other than direct connections to the branch circuit (e.g. use of power strips).

To install the ears:

1. There are screws that secure each side of the MPS-100 top cover. Using a #2 Phillips screwdriver, remove the three screws closest to the front panel from one side of the unit. Refer to the diagram following step 3 for a detailed view.
2. Position a rack ear so that its mounting holes align with the holes vacated by the screws in step 1.
3. Secure the ear to the unit with three screws from step 1, as shown in the following diagram.
4. Repeat procedure (steps 1 through 3) to attach the remaining ear to the opposite side.

**NOTE:** The sync input impedance and DDC feature should be set prior to placing the MPS-100 in an equipment rack. For more information, refer to “Configure the RGB Input Ports” on page 24.

**Stacking**

Four “feet” are located on the bottom of the MPS-100 so that if the unit is not rack mounted, the rubber feet can provide stability when the unit is placed on a flat surface or stacked.

**Hardware Hookup**

Make the necessary connections as called out in the illustrations that follows this paragraph. Refer to “Network Wiring” on page 19 before applying power. Apply power after all connections have been made.

**Hardware Connections for the MPS-100, Front**

![Diagram of hardware connections for the MPS-100](image_url)
When running the out-of-the-box program, the MPS-100 can support the following:

- (2) APAD
- (2) C2N-FTB
- (2) CNX-B12
- (2) C2N-DB12
- (2) CLW-DIM1RF / CLW-DIMS1RF (requires Crestron Toolbox for implementation)
- (2) CLW-SW1RF / CLW-SWS1RF (requires Crestron Toolbox for implementation)
- (1) QM-AMP3x80MM/SR
- (1) C2N-MNETGW
- (1) CLS-C6
- (1) RoomView Express/Server Edition connection

**CAUTION:** Speakers must be rated to full available output.

**CAUTION:** Do not bridge speaker outputs.

**CAUTION:** All source devices should be grounded to the MPS-100.

**NOTE:** The MPS-100 can only be powered by the included power cord. Power cannot be supplied from network devices that are connected to the mini-terminal block connectors.

**NOTE:** For Cresnet, CAT5, and QuickMedia connections, use Crestron Certified Wire.

**NOTE:** When running the out-of-the-box program, relays 1 and 2 are momentary.

**NOTE:** When running the out-of-the-box program and connecting a projector screen, the “up” control lines should be connected to relay 1 and the “down” control lines should be connected to relay 2.
NOTE: To analyze Cresnet lines, the C2N-ANLZ is required. For instructions, refer to the latest version of the C2N-ANLZ Operations Guide (Doc. 6473).

Balanced and unbalanced audio inputs/outputs are provided, utilizing five-pin terminal block connectors. For connection details, refer to the following table and diagrams.

**Audio Connections**

<table>

**Typical Balanced/Unbalanced Inputs**

**Typical Balanced/Unbalanced Outputs**

**Configure the RGB Input Ports**

Each of the RGB input ports feature a set of six DIP switches located inside the MPS-100. These switches are used to set the sync input impedance of each port and simulate the presence of a monitor (DDC) for each RGB input.

The sync input impedance can be set to either 1k, 500, or 75 ohms. The setting from the factory is 1k ohms and should work with most RGB sources. If the signal quality is poor, lowering the input impedance to match the impedance of coax cable may
alleviate sync signal problems that are associated with RGB cables greater than the typical VESA standard (typically six feet).

For laptops that require the presence of a monitor to enable its video output, the MPS-100 has a selectable feature (DDC) that simulates the presence of a monitor so RGB sources (such as a laptop computer) will transmit a signal even when an RGB device is not connected to the MPS-100 output. Changing the DIP switch setting can enable or disable this feature. The MPS-100 is shipped from the factory with the DDC feature disabled.

NOTE: The sync input impedance and DDC feature should be set prior to placing the MPS-100 in an equipment rack.

Find the DIP Switches

The DIP switches that configure the RGB input ports are located inside the MPS-100. The only tools required are a #2 Phillips screwdriver and a grounding strap (or grounded workstation).

CAUTION: The MPS-100 contains ESD-sensitive devices. Perform the following procedure while wearing a grounding strap that is properly grounded or on a grounded workstation to avoid damaging the MPS-100.

1. Connect RGB sources and a monitor to the MPS-100 as described in “Hardware Hookup” on page 22.
2. Remove the DIP switch access panel by removing the two screws located on the bottom of the MPS-100. Use a #2 Phillips screwdriver to remove the screws.
3. Lift the access panel shown in the following diagram to expose the DIP switches. Each RGB input port has a corresponding bank of DIP switches.

DIP Switch Location
1. Referring to the following table, set the DIP switches of each RGB input port to the required sync input impedance and DDC functionality.

**NOTE:** The function table is also located on the bottom of the MPS-100.

**NOTE:** The factory setting for the DIP switches are DDC disabled (switches 1 & 2 in the OFF position) and 1k ohm impedance (switches 3 through 6 in the OFF position).

2. Replace the access panel and secure the screws using the #2 Phillips screwdriver.

### Further Configuration

If using the out-of-the-box functionality, the MPS-100 can be configured with the front panel. For information, refer to “Configuration” on page 32.

### Label the Buttons

Use Crestron Engraver software to print custom labels for the MPS-100’s front panel buttons and LEDs. Crestron recommends printing on 100-pound paper. Paper weighing less than 100 pounds will tend to crumple while sliding in, while paper weighing more than 100 pounds may not fit.
Programming Software

Have a question or comment about Crestron software?

Answers to frequently asked questions (FAQs) can be viewed in the Online Help section of the Crestron website. To post a question or view questions you have submitted to Crestron’s True Blue Support, log in at http://support.crestron.com. First-time users will need to establish a user account.

Earliest Version Software Requirements for the PC

NOTE: Crestron recommends that you use the latest software to take advantage of the most recently released features. The latest software is available from the Crestron website.

NOTE: Crestron software and any files on the website are for authorized Crestron dealers and Crestron Authorized Independent Programmers (CAIP) only. New users may be required to register to obtain access to certain areas of the site (including the FTP site).

Crestron has developed an assortment of Windows®-based software tools to develop an MPS-100 system. The following are the minimum recommended software versions for the PC:

<table>
<thead>
<tr>
<th>Software</th>
<th>REQUIRED SOFTWARE VERSION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Program control system to operate MPS-100.</td>
<td>SIMPL Windows version 2.08.18 or later with SIMPL+ Cross Compiler version 1.1 or later; Also requires Crestron Database version 18.4.0 or later.</td>
</tr>
<tr>
<td>Upload program and firmware.</td>
<td>Crestron Toolbox 1.04 or later.</td>
</tr>
<tr>
<td>Program with simple wizards for systems using an MPS-100 (optional but recommended).</td>
<td>Crestron SystemBuilder™ version 3.2 or later (requires SIMPL Windows, VT Pro-e, Crestron Database and Crestron Engraver) with SystemBuilder Templates version 3.2 or later. Refer to software release notes or Crestron website for other required Crestron software packages.</td>
</tr>
<tr>
<td>Configure audio parameters</td>
<td>Crestron Toolbox with QM Tools version 1.04.21 or later</td>
</tr>
<tr>
<td>Create labels for front panel buttons.</td>
<td>Crestron Engraver 3.3 or later.</td>
</tr>
<tr>
<td>Manage MPS-100 systems within a facility (optional).</td>
<td>RoomView® Express or RoomView Server Edition or later.</td>
</tr>
</tbody>
</table>

Programming with Crestron SystemBuilder

Crestron SystemBuilder is the easiest method of programming but does not offer as much flexibility as SIMPL Windows. For additional details, download SystemBuilder from the Crestron website and examine the extensive help file.
Any program created for the MPS-100 with SystemBuilder will include the out-of-the-box functionality in addition to any additional programming created with SystemBuilder.

### Programming with SIMPL Windows

**NOTE:** While SIMPL Windows can be used to program the MPS-100, it is recommended to use SystemBuilder for configuring an MPS-100 system.

SIMPL Windows is Crestron’s premier software for programming Crestron control systems. It is organized into two separate but equally important “Managers”.

Any SIMPL Windows program written for an MPS-100 will contain all of the MPS-100’s out-of-the-box functions in a protected area of the program. The parts of the program that contain the out-of-the-box functions are locked and cannot be changed or deleted. When a program is compiled, the custom program plus the out-of-the-box front panel functionality, including setup menus, are loaded.

**NOTE:** When programming an MPS-100 in SIMPL Windows, always begin with the example program and modify as required. To find example programs, refer to “Example Program” on page 29. Also visit Crestron’s True Blue Support on the web for more programming tips.

#### Configuration Manager

Configuration Manager is the view where programmers “build” a Crestron control system by selecting hardware from the **Device Library**.

- To incorporate the MPS-100 into the system, drag the MPS-100 from the Control Systems folder of the **Device Library** and drop it in the **System Views**.

#### Locating the MPS-100 in the Device Library

- **Crestron Devices (DvLib 414)**
  - **Control Systems**
    - **MP2E**
    - **MPS-100**
    - **PAC2**
    - **PAC2M**
    - **PRO2**
    - **QM-RMC**

#### Program Manager

Program Manager is the view where programmers "program" a Crestron control system by assigning signals to symbols.

Signals that are part of the MPS-100’s out-of-the-box functionality are locked and cannot be modified or deleted. Locked signals are grayed out in the MPS-100’s SIMPL Windows symbols. To prevent corruption of the out-of-the-box functionality, locked signal names should not be copied or driven to other destinations in the SIMPL Windows program.

**NOTE:** If using SIMPL Windows version 2.08.19 or later, signals that are part of the out-of-the-box functionality may be hidden from view. To view hidden signals in a program containing out-of-the-box functionality, select **Display Out Of The Box Functionality (OOTBF) Programming** in the “SIMPL Windows Preferences” window (Options | Preferences...).
The symbol can be viewed by double clicking on the icon or dragging it into Detail View. A description for each signal in the symbol is described in the SIMPL Windows help file (F1).

**Switching Programs**

If a custom program is loaded into the MPS-100, the MPS-100 will run the custom program when it boots up. To switch to the out-of-the-box program:

1. Press and release **HW-R**.
2. Press and hold **SW-R** until "Bypassing Custom Program, Running OOTBF" is displayed on the LCD.
3. To return to the custom program simply press **HW-R** or cycle power.

**Saving Settings**

Settings such as tone/volume levels (out-of-the-box and custom programs) and input/output names (out-of-the-box programs) are stored in an xml and text file that can be recalled should an MPS-100 program need to be updated.

To save settings for later use, use Crestron Toolbox’ File Manager utility to retrieve the *.xml (where * can be “ootbf” for settings made when running the out-of-the-box functionality program or “custom” for settings made when running a custom program) and *System Configuration.txt files from the NVRAM Disk directory. After the new out-of-the-box functionality program or custom program has been loaded, use Windows Explorer and Crestron Toolbox’ File Manager utility to place the appropriate *.xml and *System Configuration.txt files in the NVRAM Disk directory and reboot the processor. For instructions on using Crestron Toolbox’ File Manager utility, refer to the Crestron Toolbox help file.

**NOTE:** If switching to a different type of program (i.e. from out-of-the-box functionality to custom or vice-versa), the retrieved xml file can be renamed (ootbf.xml becomes custom.xml and custom.xml becomes ootbf.xml). The running program will import any relevant settings. Verify that all of the required settings are correct.

**Example Program**

An example program for the MPS-100 is available from the Crestron website (http://www.crestron.com/exampleprograms).
Uploading and Upgrading

Crestron recommends using the latest programming software and that each device contains the latest firmware to take advantage of the most recently released features. However, before attempting to upload or upgrade it is necessary to establish communication. Once communication has been established, files (for example, programs or firmware) can be transferred to the control system. Finally, program checks can be performed (such as changing a device ID or creating an IP table) to ensure proper functioning.

While the next section provides an overview for communication, refer to “Establishing Communications with the Control System” in the Crestron 2-Series Control Systems Reference Guide (Doc. 6256) for connection details. If communications cannot be established, refer to “Troubleshooting Communications” in the same guide.

Establishing Communication

Use Crestron Toolbox for communicating with the MPS-100; refer to the Crestron Toolbox help file for details. There are two methods of communication.

NOTE: Required for initial setup of Ethernet parameters.

USB Communication

- The COMPUTER port on the MPS-100 connects to the USB port on the PC via the included Type-A to Type B USB cable.
- Use the Address Book in Crestron Toolbox to create an entry using the expected communication protocol (USB). When multiple USB devices are connected, identify the MPS-100 by entering “MPS-100” in the Model textbox, the unit’s serial number in the Serial textbox or the unit’s hostname in the Hostname textbox. The hostname can be found in the “System Info” window in the section marked Ethernet however, communications must be established in order to see this information in the “System Info” window.

NOTE: The hostname can also be viewed using the front panel. Refer to page 46 for more information.

- Display the MPS-100’s “System Info” window (click the icon); communications are confirmed when the device information is displayed.
**TCP/IP Communication**

**Ethernet Communication**

- Establish USB communications between the MPS-100 and a PC.
- Enter the IP address, IP mask and default router of the MPS-100 via the Crestron Toolbox (Functions | Ethernet Addressing); otherwise enable DHCP.
- Confirm Ethernet connections between MPS-100 and PC. If connecting through a hub or router, use CAT5 straight through cables with 8-pin RJ-45 connectors. Alternatively, use a CAT5 crossover cable to connect the two LAN ports directly without using a hub or router.
- Use the Address Book in the Crestron Toolbox to create an entry for the MPS-100 with the MPS-100’s TCP/IP communication parameters.
- Display the “System Info” window (click the icon) and select the MPS-100 entry.

**Programs and Firmware**

Program and firmware files may be distributed from programmers to installers or from Crestron to dealers. Firmware upgrades are available from the Crestron website as new features are developed after product releases. One has the option to upload programs via the programming software or to upload and upgrade via the Crestron Toolbox. For details on uploading and upgrading, refer to the SIMPL Windows help file or the Crestron Toolbox help file.

**Program**

If a SIMPL Windows program is provided, it can be uploaded to the control system using SIMPL Windows or Crestron Toolbox. If an updated out-of-the-box-functionality program is provided, it can be uploaded to the control system using Crestron Toolbox.

**Firmware**

Check the Crestron website to find the latest firmware. (New users may be required to register to obtain access to certain areas of the site, including the FTP site.)

- Upgrade MPS-100 firmware via Crestron Toolbox.
- Establish USB or TCP/IP communications with the MPS-100 and display the “System Info” window.
- Select Functions | Firmware… to upgrade the MPS-100 firmware.
Configuration and Operation

The MPS-100 can be used for audio and video switching without any programming required. This is ideal for those that need a basic audio-video switching system. Prior to operation, the MPS-100 must be configured for use.

Configuration

The MPS-100 is configured using the built-in menu.

Access the Menu

To access the menu:

- Press the MENU button. Instructions for entering the password will be displayed followed by a blinking cursor that prompts you to enter the password.

  **Enter Password**

- Enter the password with the volume control and the ▼ and ▲ buttons.

  **NOTE:** Administrator and user passwords can be created in SystemBuilder when creating a custom program. Refer to the SystemBuilder help file for more information. Users who enter an administrator password can change any of the MPS-100 settings. Users who enter a user password can only view the MPS-100 settings. The MPS-100 can determine when an administrator or user password is entered.

  **NOTE:** If running the out-of-the-box program, the default password (which has the same rights as an administrator password) is **12345**. It can be changed within the Control Setup menu. Refer to page 52 for more information.

  - Turn the volume control until the correct digit is displayed.
  - Press the ▲ button to move the cursor to the next digit and select the next digit in the password with the volume control. Press the ▼ button to move to the previous digit.
  - Press ENTER once the password has been entered. If an incorrect password is entered, the display will show “Invalid Password” and return to the Enter Password screen.
Exit the Menu

To exit the menu:

- While in the main menu, press the MENU button to exit the menu.

Exit Menu Prompt

Exit Setup Menu?

Yes  No

⇒ Press the soft button labeled Yes to exit the menu or press the soft button labeled No to return to the menu.

NOTE: The following sections describe configuration instructions when the MPS-100 is running the out-of-the-box program or if an administrator password was entered (while a custom program is running). If a user password was entered while a custom program is running, the user can view the settings but cannot make changes. For information on administrator and user passwords, refer to the SystemBuilder help file.

NOTE: When the system is being configured, system operation is suspended.

Menu Structure

The following diagram displays the menu structure of the MPS-100.

MPS-100 Menu Structure
The menu is separated into four sections.

- **Audio Setup**: Contains controls for tone (bass, treble, and balance), minimum and maximum volume, stereo or mono sound, and source input compensation.
- **Video Setup**: Contains controls for naming input sources, selecting input signal types (video inputs only), and naming output destinations.
- **Network Setup**: Contains controls for setting the IP address of the MPS-100, the IP address of the subnet mask used by the MPS-100, the IP address of the default router used by the MPS-100, the DHCP mode of the MPS-100, and the WINS mode of the MPS-100. The Network Setup section can also display the hostname and MAC address of the MPS-100 as well as the domain name used by the MPS-100. The MPS-100's Roomview settings can also be adjusted.
- **Control Setup**: Contains controls for adjusting the LCD backlight, naming the function buttons, identifying network devices, updating connected APAD devices, setting the front panel password, displaying system information, displaying system messages, setting the time and date, and restoring default settings.

### Audio Setup

The audio characteristics of the MPS-100 can be configured from the front panel using the Audio Setup menu.

**Access the Audio Setup Menu**

To access the Audio Setup menu:

- Access the menu as described on page 32. The words “Audio Setup” will be displayed.
- Press **ENTER** to open the Audio Setup menu.
- To exit the Audio Setup menu, press **MENU**.

### Tone Controls

Tone controls are used to set the bass, treble, and balance of the speaker and program audio outputs. The line outputs are not affected by changes made to the tone controls.

**Access the Tone Control Menu**

To access the tone controls:

- Access the Audio Setup menu as described above. “Tone Control” will be displayed.
- Press **ENTER** to open the Tone Control menu.
- To exit the tone controls, press **MENU**.

**Set the Bass Level**

To set the bass level:

- Access the Tone Control menu as described above.
- Press the ↑ or ↓ buttons until “Bass” is displayed on the LCD and press **ENTER** to open the Bass controls. The current bass level will be displayed.
Bass Controls

- Adjust the bass level with the ▼ and ▲ buttons. Press the ▲ button to increase the bass level. Press the ▼ button to lower the bass level.

**NOTE:** While adjusting the bass level, the volume level can be adjusted by turning the volume control clockwise to raise the volume, or counterclockwise to lower the volume. When adjusting the volume, the display will change to indicate the volume level.

- Press MENU or ENTER to save changes and return to the previous screen.

Set the Treble Level

To set the treble level:

- Access the Tone Control menu as described on page 34.
- Press the ▲ or ▼ buttons until “Treble” is displayed on the LCD and press ENTER to open the Treble controls. The current treble level will be displayed.

**Treble Control**

- Adjust the treble level with the ▼ and ▲ buttons. Press the ▲ button to increase the treble level. Press the ▼ button to lower the treble level.

**NOTE:** While adjusting the treble level, the volume level can be adjusted by turning the volume control clockwise to raise the volume, or counterclockwise to lower the volume. When adjusting the volume, the display will change to indicate the volume level.

- Press MENU or ENTER to save changes and return to the previous screen.

Set the Balance

To balance the audio outputs:

- Access the Tone Control menu as described on page 34.
Press the ▲ or ▼ buttons until “Balance” is displayed on the LCD and press ENTER to open the Balance controls. The current setting will be displayed.

**Balance Control**

- Adjust the balance with the ▼ and ▲ buttons. Press the ▲ button to shift the balance to the right. Press the ▼ button to shift the balance to the left.

**NOTE:** While adjusting the balance, the volume level can be adjusted by turning the volume control clockwise to raise the volume, or counterclockwise to lower the volume. When adjusting the volume, the display will change to indicate the volume level.

- Press MENU or ENTER to save changes and return to the previous screen.

**Min/Max Volume Controls**

The Min Volume and Max Volume controls are used to set the lowest and highest volume settings respectively. The line outputs are not affected by changes made to the minimum and maximum volumes.

### Access the Minimum / Maximum Volume Menu

To access the Minimum / Maximum Volume menu:

- Access the Audio Setup menu as described on page 34.
- Press the ▲ or ▼ buttons until “Min/Max Vol.” is displayed on the LCD and press ENTER to open the Min Volume and Max Volume menu.
- To exit the Min Volume and Max Volume menu, press MENU.

### Set the Minimum Volume

To set the minimum volume level:

- Access the Minimum / Maximum Volume menu as described above.
- Press the ▲ or ▼ buttons until “Min Volume” is displayed on the LCD and press ENTER to open the Minimum Volume controls.
**Minimum Volume Control**

- Adjust the minimum volume level with the \( \downarrow \) and \( \uparrow \) buttons. Press the \( \uparrow \) button to increase the minimum volume level. Press the \( \downarrow \) button to lower the minimum volume level. The highest minimum volume setting is 30%.

**NOTE:** While adjusting the minimum volume level, the system’s volume level can be adjusted by turning the volume control clockwise to raise the volume, or counterclockwise to lower the volume. When adjusting the volume, the display will change to indicate the volume level.

- Press **MENU** or **ENTER** to save changes and return to the previous screen.

**Set the Maximum Volume**

To set the maximum volume level:

- Access the Minimum / Maximum Volume menu as described on page 36.
- Press the \( \uparrow \) or \( \downarrow \) buttons until “Max Volume” is displayed on the LCD and press **ENTER** to open the Maximum Volume controls.

**Maximum Volume Control**

- Adjust the maximum volume level with the \( \downarrow \) and \( \uparrow \) buttons. Press the \( \uparrow \) button to increase the maximum volume level. Press the \( \downarrow \) button to lower the maximum volume level. The lowest maximum volume setting is 50%.

**NOTE:** While adjusting the maximum volume level, the system’s volume level can be adjusted by turning the volume control clockwise to raise the volume, or counterclockwise to lower the volume. When adjusting the volume, the display will change to indicate the volume level.

- Press **MENU** or **ENTER** to save changes and return to the previous screen.
**Stereo / Mono Mode**

The Stereo / Mono controls are used to set audio output mode. The audio sent to the speakers outputs can be set for either stereo or mono. When set to stereo, the audio signal is separated into left and right channels for distribution to left and right speakers or amplifier channels. When set to mono, the audio signal is combined into one signal for use in larger rooms where stereo separation is not practical. The line outputs are not affected by changes stereo/mono mode.

**Set the Stereo / Mono Mode**

To set the Stereo / Mono mode:

- Access the Audio Setup menu as described on page 34.
- Press the ▲ or ▼ buttons until “Stereo/Mono” is displayed on the LCD and press ENTER to open the Stereo / Mono controls as shown in the following diagram.

**Stereo / Mono Control**

```
Stereo/Mono
Stereo

```

- Press the ▲ or ▼ buttons until the desired mode is displayed on the LCD and press ENTER. The current setting is indicated with an asterisk (*).

**NOTE:** While adjusting the stereo/mono setting, the system’s volume level can be adjusted by turning the volume control clockwise to raise the volume, or counterclockwise to lower the volume. When adjusting the volume, the display will change to indicate the volume level.

- To exit the Stereo / Mono controls, press MENU.

**Input Compensation**

The compensation level of each input can be set from the MPS-100’s front panel. The line outputs are not affected by changes made to the input compensation level.

**Set the Compensation Level**

To set the compensation level for an input:

- Access the Audio Setup menu as described on page 34.
- Press the ▲ or ▼ buttons until “Input Compensation” is displayed on the LCD and press ENTER to open the Select Input to Compensate controls as shown in the following diagram. To view the remaining input, press the ▼ button.
Select Input to Compensate

Input Compensation
Input 1 Comp.

- To select the input to compensate, press the ▲ or ▼ buttons until the desired input is displayed and press ENTER.

Adjust Compensation Level

Input 1 Comp.
0db

- Adjust the compensation level with the ▼ and ▲ buttons. Press the ▲ button to increase the compensation level. Press the ▼ button to lower the compensation level. Compensation can range from –10db to 10db. A compensation level of 0db will provide neutral compensation.

NOTE: While adjusting the compensation level, the system’s volume level can be adjusted by turning the volume control clockwise to raise the volume, or counterclockwise to lower the volume. When adjusting the volume, the display will change to indicate the volume level.

- Press ENTER to store the setting. The display will return to the Select Input to Compensate controls.
- Repeat for each input to be adjusted.
- Press MENU to save changes and return to the previous screen.

Startup Volume Control

The Startup Volume control is used to establish the volume level setting when an input is selected. The line outputs are not affected by changes made to the startup volume.

Adjust the Startup Volume

To adjust the Startup Volume control:

- Access the Audio Setup menu as described on page 34.
- Press the ▲ or ▼ buttons until “Startup Vol.” is displayed on the LCD and press ENTER to open the Startup Volume control.
### Startup Volume Control

- Adjust the startup volume level with the ▼ and ▲ buttons. Press the ▲ button to increase the startup volume level. Press the ▼ button to lower the startup volume level. The highest minimum volume setting is 100%.

**NOTE:** While adjusting the startup volume level, the system’s volume level can be adjusted by turning the volume control clockwise to raise the volume, or counterclockwise to lower the volume. When adjusting the volume, the display will change to indicate the volume level.

- Press **MENU** or **ENTER** to save changes and return to the previous screen.

### Video Setup

The video characteristics of the MPS-100 can be configured from the front panel using the Video Setup menu.

#### Access the Video Setup Menu

To access the Video Setup menu:

- Access the menu as described on page 32. Press the ▲ or ▼ buttons until “Video Setup” is displayed on the LCD.
- Press **ENTER** to open the Video Setup menu.
- To exit the Video Setup menu, press **MENU**.

#### Name Video Inputs

The MPS-100 ships with default names assigned to each of the inputs. Input 1 is called “BNC 1”. Input 2 is called “BNC 2”. Input 3 is called “RGBHV 3”. Input 4 is called “RGBHV 4”. Input 5 is called “RGBHV 5”. To change the input names:

- Access the Video Setup menu as described above.
- Press the ▲ or ▼ buttons until “Input Names” is displayed on the LCD and press **ENTER** to open the Input Naming menu.

#### Select Input to Name

- ▼
• Press the ▲ or ▼ buttons until the input to be named is displayed on the LCD and press ENTER. The cursor is placed after the last character in the input name.

**Name the Input**

![Input Naming Menu](image)

- Turn the volume control clockwise or counterclockwise (or press the ▲ or ▼ buttons) to select a new letter (uppercase or lowercase) or number. Move the cursor by pressing the soft buttons labeled < or >. Each input name can be up to 14 characters in length. To delete a character, position the cursor under the character to be deleted and press the soft button labeled DEL. To insert a space, position the cursor where the space is to be inserted and press the soft button labeled INS.
- Press ENTER to save the new name and return to the Input Naming menu or press MENU to cancel the operation and return to the Input Naming menu.
- After all inputs have been named, press MENU to return to the Video Setup menu.

**Select Input Type**

The two BNC video inputs of the MPS-100 can accept composite, S-video, or component signals. Specifying the input signal type determines which of the output connectors receives the selected input signal. To specify the signal types expected by each of the inputs:

- Access the Video Setup menu as described on page 40.
- Press the ▲ or ▼ buttons until “Input Types” is displayed on the LCD and press ENTER to open the Input Type menu.

**Select Input Type Menu**

![Input Type Menu](image)

- Press the ▲ or ▼ buttons to select the video input to be configured and press ENTER. The current setting is indicated with an asterisk (*).
- Press the ▲ or ▼ buttons until the desired input type is displayed.
Select Input Type

Select Input 1 Type
* Composite

- Press ENTER to save the input type and return to the Select Input Type menu or press MENU to cancel the operation and return to the Select Input Type menu.
- After all inputs have been configured, press MENU to return to the Video Setup menu.

Name Video Outputs

The MPS-100 ships with default names assigned to each of the outputs. Output 1 is called “PROJECTOR”. Output 2 is called “TOUCHPANEL”. To change the output names:

- Access the Video Setup menu as described on page 40.
- Press the or buttons until “Output Names” is displayed on the LCD and Press ENTER to open the Output Naming menu.

Select Output to Name

- Press the or buttons until the output to be named is displayed on the LCD and press ENTER. The cursor is placed after the last character in the output name.

Name the Output

- Press the or buttons until the output to be named is displayed on the LCD and press ENTER. The cursor is placed after the last character in the output name.

PROJECTOR_
DEL INS < >
• Turn the volume control clockwise or counterclockwise (or press the ▲ or ▼ buttons) to select a new letter (uppercase or lowercase) or number. Move the cursor by pressing the soft buttons labeled ◀ or ▶. Each output name can be up to 14 characters in length. To delete a character, position the cursor under the character to be deleted and press the soft button labeled DEL. To insert a space, position the cursor where the space is to be inserted and press the soft button labeled INS.

• Press ENTER to save the new name and return to the Output Naming menu or press MENU to cancel the operation and return to the Output Naming menu.

• After all outputs have been named, press MENU to return to the Video Setup menu.

**Network Setup**

The network settings of the MPS-100 can be configured and reviewed from the front panel using the Network Setup menu.

**NOTE:** Some changes to network settings may require a reboot to take effect. The system will automatically reboot when necessary.

---

**Access the Network Setup Menu**

To access the Network Setup menu:

• Access the menu as described on page 32. Press the ▲ or ▼ buttons until “Network Setup” is displayed on the LCD.

• Press ENTER to open the Network Setup menu.

• To exit the Network Setup menu, press MENU.

---

**Set the IP Address**

The MPS-100 uses TCP/IP communications for communications between network devices, a PC, and RoomView Help Desk software. The IP address can be manually set or obtained from a DHCP server. For information on using DHCP to obtain an IP address, refer to “Set the DHCP Mode” on page 45. To manually set an IP address:

• Access the Network Setup menu as described above.

• Press the ▲ or ▼ buttons until “IP Address” is displayed on the LCD and press ENTER to display the IP Address controls. The current IP address will be displayed.

**Display the IP Address**

```plaintext
IP Address
[000] 000. 000. 000
```

• Turn the volume control clockwise or counterclockwise to select a number in the left-most section of the IP address. You can also press the ▲ or ▼ buttons to select a number.
Press ENTER to move the cursor to the next section of the address. To change a different section, press the soft button under the section to be changed.

Repeat the previous two steps until the entire IP address is set.

To save the new address and return to the Network Setup menu, move the cursor to the right-most section and press ENTER. To cancel the operation and return to the Network Setup menu, press MENU.

---

**Set the Subnet Mask**

The MPS-100 can be configured to use an IP Subnet Mask for TCP/IP communications. To set the address of the IP Subnet Mask:

- Access the Network Setup menu as described on page 43.
- Press the \[ or \] buttons until “Subnet Mask” is displayed on the LCD and press ENTER to display the Subnet Mask controls. The current IP address of the Subnet Mask will be displayed.

---

**Display the IP Subnet Mask Address**

Subnet Mask

[000] 000. 000. 000

- Turn the volume control clockwise or counterclockwise to select a number. You can also press the \[ or \] buttons to select a number.
- Press ENTER to move the cursor to the next section of the address. To change a different section, press the soft button under the section to be changed.
- Repeat the previous two steps until the entire Subnet Mask IP address is set.
- To save the new address and return to the Network Setup menu, move the cursor to the right-most section and press ENTER. To cancel the operation and return to the Network Setup menu, press MENU.

---

**Set the Default Router**

The MPS-100 can be configured to use a Default Router for TCP/IP communications. To set the IP address of the Default Router:

- Access the Network Setup menu as described on page 43.
- Press the \[ or \] buttons until “Def. Router” is displayed on the LCD and press ENTER to display the Default Router controls. The current IP address of the Default Router will be displayed.
Display the Default Router Address

- Turn the volume control clockwise or counterclockwise to select a number. You can also press the ▲ or ▼ buttons to select a number.
- Press ENTER to move the cursor to the next section of the address. To change a different section, press the soft button under the section to be changed.
- Repeat the previous two steps until the entire Default Router IP address is set.
- To save the new address and return to the Network Setup menu, move the cursor to the right-most section and press ENTER. To cancel the operation and return to the Network Setup menu, press MENU.

Set the DHCP Mode

The IP address can be obtained from a DHCP server or manually set. For information on manually setting the IP address, refer to “Set the IP Address” on page 43. To set the DHCP mode:

- Access the Network Setup menu as described on page 43.
- Press the ▲ or ▼ buttons until “DHCP” is displayed on the LCD and press ENTER to display the DHCP controls.

DHCP Settings

- Press ▲ and ▼ buttons to toggle between On and Off. The current setting is indicated with an asterisk (*).
- To save the setting and return to the Network Setup menu, press ENTER. To cancel the operation and return to the Network Setup menu, press MENU.
**Set the WINS Mode**

The MPS-100 can use a WINS server to obtain an IP address. To set the WINS mode:

- Access the Network Setup menu as described on page 43.
- Press the ↑ or ↓ buttons until “WINS” is displayed on the LCD and press ENTER button to display the WINS controls.

**Display the WINS Mode**

- Press the ↑ and ↓ buttons to toggle between On and Off. The current setting is indicated with an asterisk (*).
- To save the setting and return to the Network Setup menu, press ENTER. To cancel the operation and return to the Network Setup menu, press MENU.

**View and Set the Hostname**

The MPS-100 can be recognized by its hostname in a networked environment. To view and set the hostname:

- Access the Network Setup menu as described on page 43.
- Press the ↑ or ↓ buttons until “HostName” is displayed on the LCD and press ENTER to display the Hostname controls. The current Hostname will be displayed.

**Display the Hostname**

- Press ENTER to change the Hostname. A cursor is placed after the last character in the Hostname.
Change the Hostname

MPS-100-00105D06123D
DEL INS < >

- Turn the volume control clockwise or counterclockwise (or press the ▲ or ▼ buttons) to select a new letter (uppercase or lowercase) or number. Move the cursor by pressing the soft buttons labeled < or >. The Hostname can be up to 64 characters in length. To delete a character, position the cursor under the character to be deleted and press the soft button labeled DEL. To insert a space, position the cursor where the space is to be inserted and press the soft button labeled INS.

- To save the new name and return to the Network Setup menu, press ENTER. To cancel the operation and return to the Hostname display, press MENU.

View and Set the Domain Name

Some networks may require a Domain name to resolve the hostname. To view and set the Domain name:

- Access the Network Setup menu as described on page 43.

- Press the ▲ or ▼ buttons until “Domain Name” is displayed on the LCD and press ENTER to display the Domain name controls. The current Domain name (if entered) will be displayed.

Display the Domain Name

corporate.crestron.

- Press ENTER to change the Domain name. A cursor is placed after the last character in the Domain name.
**Change the Domain Name**

To change the domain name:

- Turn the volume control clockwise or counterclockwise (or press the ↑ or ↓ buttons) to select a new letter (uppercase or lowercase) or number. Move the cursor by pressing the soft buttons labeled < or >. The Domain name can be up to 64 characters in length. To delete a character, position the cursor under the character to be deleted and press the soft button labeled DEL. To insert a space, position the cursor where the space is to be inserted and press the soft button labeled INS.

- To save the new name and return to the Network Setup menu, press ENTER. To cancel the operation and return to the Domain name display, press MENU.

**Set the RoomView Mode**

The MPS-100 can be configured to report to RoomView Express (formerly known as RoomView 6.0) or RoomView Server Edition (formerly known as RoomView 7.0). To set the version of RoomView:

- Access the Network Setup menu as described on page 43.
- Press the ↑ or ↓ buttons until “RoomView” is displayed on the LCD and press ENTER to display the RoomView controls.

**Display the RoomView Settings**

- Press the ↑ and ↓ buttons to toggle between RV 6.0 (RoomView Express), RV 7.0 (RoomView Server Edition), or RV None. The current setting is indicated with an asterisk (*). When set to RoomView None, the MPS-100 will not report any status information.

- To save the setting and return to the Network Setup menu, press ENTER. To cancel the operation and return to the Network Setup menu, press MENU.

For more information on using RoomView, refer to the RoomView help file.
Display the MAC Address

The MPS-100 can display its MAC address. To view the MAC address:

- Access the Network Setup menu as described on page 43.
- Press the ▲ or ▼ buttons until “MAC Address” is displayed on the LCD and press ENTER to display the MAC address.
- Press MENU to return to the Network Setup menu.

Control Setup

Basic control system operations can be performed from the MPS-100 front panel using the Control Setup menu.

Access the Control Setup Menu

To access the Control Setup menu:

- Access the menu as described on page 32. Press the ▲ or ▼ buttons until “Control Setup” is displayed on the LCD.
- Press ENTER to open the Control Setup menu.
- To exit the Control Setup menu, press MENU.

Change the Backlight Level

The brightness of the LCD’s backlight can be adjusted for ease of viewing. To adjust the brightness level from the front panel:

- Access the Control Setup menu as described above.
- Press the ▲ or ▼ buttons until “Backlight” is displayed on the LCD and press ENTER to display the Select Brightness controls.

Display the Select Brightness Controls

Select Brightness

Bkl Low ▼

- Press the ▼ or ▲ buttons to select a brightness level (low, medium, or high). The current level is indicated with an asterisk (*).
- To save the setting and return to the Control Setup menu, press ENTER. To cancel the operation and return to the Network Setup menu, press MENU.

Name the Function Buttons

The MPS-100 ships with default names assigned to each of the five function buttons. Button 1 is called “MUTE”. Button 2 is called “SCREEN DOWN”. Button 3 is called “SCREEN UP”. Button 4 is called “LIGHTS PRESET 1”. Button 5 is called “LIGHTS PRESET 2”. Function names can be changed from the front panel.

To change the function names:

- Access the Control Setup menu as described above.
- Press the ▲ or ▼ buttons until “Functions” is displayed on the LCD and press ENTER to display the Function Naming menu.
Select Function to Name

Press the \( \uparrow \) or \( \downarrow \) buttons until the function to be named is displayed on the LCD and press ENTER. The cursor is placed after the last character in the function name.

Name the Function

Turn the volume control clockwise or counterclockwise (or press the \( \uparrow \) or \( \downarrow \) buttons) to select a new letter (uppercase or lowercase) or number. Move the cursor by pressing the soft buttons labeled \( < \) or \( > \). Each function name can be up to 14 characters in length. To delete a character, position the cursor under the character to be deleted and press the soft button labeled DEL. To insert a space, position the cursor where the space is to be inserted and press the soft button labeled INS.

Press ENTER to save the new name and return to the Function Naming menu or press MENU to cancel the operation and return to the Function Naming menu.

After all functions have been named, press MENU to return to the Control Setup menu.

Identify Network Devices

Use the front panel to identify the presence of Cresnet devices such as APAD, C2N-DB12, CNX-B12, and C2N-FTB keypads, C2N-MNETGW gateways, CLS-C6 lighting systems, and QM-AMP amplifiers:

- Access the Control Setup menu as described on page 49.
- Press the \( \uparrow \) or \( \downarrow \) buttons until “Devices” is displayed on the LCD and press ENTER.
- The MPS-100 will poll the Cresnet network to detect Cresnet devices. The display will prompt the user to press ENTER to ID all devices.
ID Devices Prompt

Press ENTER to ID all devices.

- Press ENTER to continue the identification process, the MPS-100 will clear all device settings and prompt the user to select the device type to be identified.

Select Device Type

Select device type

APAD

- Press the or buttons until the device type to be identified is displayed on the LCD and press ENTER. The buttons (or SETUP LEDs) of the selected device type will flash. Press a button (or the SETUP button) on the selected device type to identify the device.
- Repeat for all other device types that are connected to the MPS-100.
- Press the MENU button to return to the menu.

NOTE: For information on using the front panel and input devices with the MPS-100, refer to “Operation” on page 59.

NOTE: If a C2N-MNETGW has been identified, infiNET switches and dimmers must still be identified with Crestron Toolbox. Refer to the respective infiNET switch and dimmer manuals for more information.

Upgrade Connected APADs

APAD devices may need to be programmed to work with the MPS-100. If a connected APAD does not display controls for the MPS-100, perform the following.

- Access the Control Setup menu as described on page 49.
- Press the or buttons until “APAD Upgrade” is displayed on the LCD and press ENTER to display the APAD Upgrade controls.
Display the APAD Upgrade Controls

To upgrade the APAD, press the ▲ or ▼ buttons until “Yes” is displayed on the LCD and press ENTER. The MPS-100 will upgrade the APAD’s firmware (if necessary) and copy the required files to the APAD.

To cancel the upgrade procedure without starting the upgrade process, press the ▲ or ▼ buttons until “No” is displayed on the LCD and press ENTER. Alternatively, you can press MENU to return to the Control Setup menu.

Change the Front Panel Password

The front panel password can be changed from the front panel:

- Access the Control Setup menu as described on page 49.
- Press the ▲ or ▼ buttons until “Password” is displayed on the LCD and press ENTER to display the Change Password controls.

Display the Change Password Controls

- Turn the volume control to select the first digit in the password.
- Press the ▲ button to move the cursor to the next digit and select the next digit in the password with the volume control. The maximum password length is 20 digits. Press the ▼ button to move to the previous digit.
- To save the new password and return to the Control Setup menu, press ENTER.
- To cancel the process without saving any changes, press MENU. The display will return to the Control Setup menu.

View System Information

Use the front panel to view information about the MPS-100. Information that can be viewed includes program information, hardware information, network information, and operating system information.
NOTE: This information can be viewed using Crestron Toolbox. For more information, refer to the Crestron Toolbox help file.

- Access the Control Setup menu as described on page 49.
- Press the \( \uparrow \) or \( \downarrow \) buttons until “Info” is displayed on the LCD and press ENTER to display the Info menu.

**Display the Info Menu**

![Info Menu Diagram]

- To view program information, press the soft button labeled REMS.

**Display the Program Information**

![Program Boot Directo Diagram]

⇒ Press the \( \uparrow \) or \( \downarrow \) buttons to see other information. If partial information is displayed, press the soft buttons labeled << or >> to view the rest of the information.

⇒ Press the MENU button to return to the Info menu.

- To view hardware information, press the soft button labeled HW.

**Display the Hardware Information**

![Current Hardware Con Diagram]

⇒ Press the \( \uparrow \) or \( \downarrow \) buttons to see other information. If partial information is displayed, press the soft buttons labeled << or >> to view the rest of the information.
⇒ Press the MENU button to return to the Info menu.

• To view a list of connected network devices, press the soft button labeled NET.

Display Connected Network Devices

2E: APAD LCD 6-bu

⇒ Press the ▲ or ▼ buttons to see other network devices. If the information for a network device is partially displayed, press the soft buttons labeled << or >> to view the rest of the information.

⇒ Press the MENU button to return to the Info menu.

• To view information on the MPS-100 operating system, press the soft button labeled OPS.

Display Operating System Information

MPS-100 Cntrl Eng [v

⇒ Press the soft buttons labeled << or >> to view the information that cannot fit on the display.

⇒ Press the MENU button to return to the Info menu.

• To return to the Control Setup menu, press MENU.

Review System Messages

The MPS-100 stores system messages in a message log. The presence of new messages in the log is indicated when the MSG LED is lit. To review system messages using the front panel:

• Access the Control Setup menu as described on page 49.

• Press the ▲ or ▼ buttons until “Messages” is displayed on the LCD and press ENTER to display the Message controls.
Display the Message Controls

System log:
Top Clear << >>

- To scroll through messages in the log, press the ▲ or ▼ buttons.
- To jump to the beginning of the log, press the soft button labeled Top.
- To jump to the last message in the long, press the soft button labeled Btm (not shown).
- To view the contents of a message press the soft buttons labeled << or >>.
- To erase the contents of the log, press the soft button labeled Clear.
- Press MENU to return to the Control Setup menu.

NOTE: The contents of the message log can be read and saved using Crestron Toolbox. For more information, refer to the Crestron Toolbox help file.

Set the Date and Time

Use the front panel to set the MPS-100’s date and time.

- Access the Control Setup menu as described on page 49.
- Press the ▲ or ▼ buttons until “Time/Date” is displayed on the LCD and press ENTER to display the Time/Date controls.

Display the Time/Date Controls

10/16/06 04:08:25PM
DATE TIME

- To set the date, press the soft button labeled DATE. The Date controls will be displayed.
Display the Date Controls

DATE: 10/16/2006
MO  DAY  YR

⇒ To set the month, press the soft button labeled MO. To set the day, press the soft button labeled DAY. To set the year, press the soft button labeled YR. A pair of brackets will appear around the selected part of the date.

⇒ Press the ↑ or ↓ buttons to increase or decrease the value of the selected part of the date.

⇒ Repeat for each part of the date.

⇒ Press ENTER to store the new date and return to the Time/Date controls or press MENU to return to the Time/Date controls without saving any changes.

• To set the time, press the soft button labeled TIME.

Display the Time Controls

TIME: 05:02:32PM
HR  MIN  AM/PM

⇒ To set the hour, press the soft button labeled HR. To set the minute, press the soft button labeled MIN. To set AM or PM, press the soft button labeled AM/PM. A pair of brackets will appear around the selected part of the time.

⇒ Press the ↑ or ↓ buttons to increase or decrease the value of the selected part of the time.

⇒ Repeat for each part of the time.

⇒ Press ENTER to store the new time and return to the Time/Date controls or press MENU to return to the Time/Date controls without saving any changes.

• To return to the Control Setup menu, press MENU.

NOTE: The date and time can be set using Crestron Toolbox. For more information, refer to the Crestron Toolbox help file.
**Restore Default Settings**

The MPS-100 can be restored to its default factory settings from the front panel. Users can select to restore the audio settings or to restore the audio settings, source names, output names, and function names.

- To restore audio settings only:
  - Access the Control Setup menu as described on page 49.
  - Press the **k** or **j** buttons until “Defaults” is displayed on the LCD and press **ENTER** to display the Restore Defaults menu.

  **Restore Defaults Menu-Audio Settings Only**

  ![Restore Defaults Menu](image)

  - Press the **k** or **j** buttons until “Audio settings only” is displayed on the LCD and press **ENTER**.

  **Confirm Restore Audio Default Settings Only**

  ![Confirm Restore Audio Settings](image)

  - Press the **k** or **j** buttons until “Yes” is displayed on the LCD and press **ENTER** to restore the audio settings to the factory defaults. To cancel, press the **k** or **j** buttons until “No” is displayed on the LCD and press **ENTER**.

- To restore all factory default settings:
  - Access the Control Setup menu as described on page 49.
  - Press the **k** or **j** buttons until “Defaults” is displayed on the LCD and press **ENTER** to display the Restore Defaults menu.
**Restore Defaults Menu-All Settings**

![Image of Restore Defaults Menu]

- Press the \(\uparrow\) or \(\downarrow\) buttons until "All settings" is displayed on the LCD and press ENTER.

**Confirm Restore All Default Settings Only**

![Image of Confirm Restore All Default Settings Only]

- Press the \(\uparrow\) or \(\downarrow\) buttons until "Yes" is displayed on the LCD and press ENTER to restore the audio settings, source names, output names, and function names to the factory defaults. To cancel, press the \(\uparrow\) or \(\downarrow\) buttons until "No" is displayed on the LCD and press ENTER.

- To cancel:
  - Press the \(\uparrow\) or \(\downarrow\) buttons until "Abort" is displayed on the LCD and press ENTER. The restore operation will be cancelled.

**Front Panel Lock Control**

The MPS-100’s front panel controls can be locked to prevent operational changes from the buttons on the front of the MPS-100. While locked, the menu can be accessed by pressing the MENU button. To open the Front Panel Lock control:

- Access the Control Setup menu as described on page 49.
• Press the ▲ or ▼ buttons until “Front Panel” is displayed on the LCD and press ENTER to display the Front Panel control.

Front Panel Lock Controls

- Press the ▲ or ▼ buttons to toggle between On and Off. The current setting is indicated with an asterisk (*).
- Press ENTER to save the new setting and return to the Control Setup menu.

Operation

Using the out-of-the-box functionality, the MPS-100 can be operated from the front panel, an APAD, a 12-button keypad such as the CNX-B12 or the C2N-DB12, or the C2N-FTB FlipTop Control Center.

Control from the Front Panel

The following describes operation of a system when using the out-of-the-box functionality and the front panel. If a custom program has been created, the system may function differently.

Turn On the System

To turn on the system:

1. Select an output by pressing either of the output buttons (PROJ or TOUCH PANEL). Pressing the button labeled PROJ will route the video signal to a projector. Pressing the button labeled TOUCH PANEL will route the video signal to a Crestron touchpanel.

2. Select any of the source inputs by pressing an input button (BNC 1, BNC 2, RGBHV 3, RGBHV 4, or RGBHV 5).

   NOTE: If the projector output was selected (by pressing PROJ), the display will prompt the user to turn on the projector.

Turn Off the System

To turn off the system, press the SYS PWR button twice.

   NOTE: If the projector output was selected (output button 1), the display will prompt the user to turn off the projector.

Lower the Projection Screen

Press the function button labeled SCREEN DOWN to lower the projector screen.

   NOTE: This function will only work if a projection screen’s control lines have been connected to RELAY 1 (up control) and RELAY 2 (down control).
**Raise the Projection Screen**

Press the button labeled **SCREEN UP** to raise the projector screen.

**NOTE:** This function will only work if a projection screen’s control lines have been connected to **RELAY 1** (up control) and **RELAY 2** (down control).

**Adjust the Volume Level**

The volume level of the MPS-100 is adjusted with the volume control knob.

- **Raise the volume:** Turn the volume control clockwise. The volume level will be displayed on the LCD.
- **Lower the volume:** Turn the volume control counterclockwise. The volume level will be displayed on the LCD.

**Mute Audio**

The audio output of the MPS-100 can be muted with the **MUTE** button.

- **Mute the audio output:** Press the button labeled **MUTE**.
- **Unmute the audio output:** Press the **MUTE** button again.

**Adjust Lighting**

To set lighting to one of two preset lighting values, press either **LIGHTS PRE 1** or **LIGHTS PRE 2**.

**NOTE:** This function will only work if a CLS-C6, infiNET switch, or infiNET dimmer was previously identified and connected to the MPS-100. The CLS-C6 can be identified as a Cresnet device in the MPS-100 setup screens as described on page 50. Crestron’s infiNET switches and dimmers require a C2N-MNETGW to be identified as described on page 50 in addition to identifying the individual switch and/or dimmer with a unique identity code (MNET ID) using Crestron Toolbox. CLW-DIM1RF and CLW-DIMS1RF dimmers use MNET IDs 03 and 04 while CLW-SW1RF and CLW-SWS1RF switches use MNET IDs 05 and 06. For information on identifying infiNET switches and dimmers, refer to the Crestron Toolbox help file.

**Control from an APAD**

The following describes operation of the system when using the out-of-the-box functionality and an APAD Wall Mount LCD Controller. If a custom program has been created, the system may function differently.
The APAD has six buttons and a Nav Wheel as shown in the following diagram.

**APAD Buttons**

![APAD Buttons Diagram]

When switching sources from the APAD, the MPS-100 will route the signal to the projector output and then route the signal to the touchpanel output.

### Turn On the System

To turn on the system:

1. Press the soft button labeled **Source** to display a list of available sources.
2. Turn the Nav Wheel to highlight the desired source (**BNC 1**, **BNC 2**, **RGBHV 3**, **RGBHV 4**, or **RGBHV 5**).

**NOTE:** Typically, signal routing information is not displayed on the front panel of the MPS-100. However, if an output button on the MPS-100 was pressed at any point during operation, routing information will be displayed and updated should any changes to routing be made.

3. Press the soft button labeled **Select** to route the source to the projector and touchpanel output.

### Turn Off the System

To turn off the system:

1. Press the **Power** button.
2. Press the soft button labeled **Sys. Off**.
3. Press the soft button labeled **Yes** to confirm. The display will indicate that the system is turning off.

### Raise or Lower the Projection Screen

To raise or lower the projection screen:

1. Press the soft button labeled **Environ**.
2. Press the soft button labeled **Screen**.
3. To raise the projection screen, press the soft button labeled **Up**. To lower the projection screen, press the soft button labeled **Down**. The display will indicate the status of the projection screen. The front panel of the MPS-100 will indicate the screen’s status.
NOTE: This function will only work if a projection screen’s control lines have been connected to RELAY 1 (up control) and RELAY 2 (down control).

**Adjust the Volume Level**

The volume level of the MPS-100 is adjusted with the Nav wheel.

- **Raise the volume:** Turn the Nav wheel clockwise. The volume level will be displayed on the LCD.
- **Lower the volume:** Turn the Nav wheel counterclockwise. The volume level will be displayed on the LCD.

**Mute Audio**

The audio output of the MPS-100 can be muted with the APAD.

- **To Mute the audio output:**
  - Press the power button
  - Press the soft button labeled **Mute**. The display will indicate that the audio output is muted. The front panel of the MPS-100 will indicate the status of the mute function.
- **To Unmute the audio output:**
  - Press the soft button labeled **Unmute**.

**Adjust Lighting**

To set lighting to one of two preset lighting values:

1. Press the soft button labeled **Environ**.
2. Press the soft button labeled **Lights**.
3. Turn the Nav wheel to highlight the desired lighting preset and press the soft button labeled **Select**. The front panel of the MPS-100 will indicate the selected preset light setting.
4. Press the soft button labeled **Back** to return to the lighting controls.

**Raise or Lower Drapes**

To raise or lower the drapes:

1. Press the soft button labeled **Environ**.
2. Press the soft button labeled **Drapes**.
3. To raise the drapes, press the soft button labeled **Up**. To lower the drapes, press the soft button labeled **Down**. The display will indicate the status of the drapes.

NOTE: This function will only work if a CLS-C6, infiNET switch, or infiNET dimmer was previously identified and connected to the MPS-100. The CLS-C6 can be identified as a Cresnet device in the MPS-100 setup screens as described on page 50. Crestron’s infiNET switches and dimmers require a C2N-MNETGW to be identified as described on page 50 in addition to identifying the individual switch and/or dimmer with a unique identity code (MNET ID) using Crestron Toolbox. CLW-DIM1RF and CLW-DIMS1RF dimmers use MNET IDs 03 and 04 while CLW-SW1RF and CLW-SWS1RF switches use MNET IDs 05 and 06. For information on identifying infiNET switches and dimmers, refer to the Crestron Toolbox help file.
NOTE: This function will only work if a drape controller has been configured in Crestron SystemBuilder or SIMPL Windows and connected to the MPS-100.

**Control from a Keypad**

The following describes operation of the system when using the out-of-the-box functionality and either a C2N-DB12 or CNX-B12 keypad. If a custom program has been created, the MPS-100 may function differently.

**NOTE:** Buttons for the keypad are custom engraved using Crestron SystemBuilder software. For instructions on installing the buttons on the keypad, refer to the keypad’s guide.

The keypad has twelve buttons as shown in the following diagram.

*C2N-DB12 Buttons*

![Keypad Diagram](image)

**NOTE:** Custom buttons can be created using Crestron Engraver software. For instructions on installing the custom buttons, refer to the keypad guide.

When switching sources from the keypad, the MPS-100 will route the signal to the projector output and then route the signal to the touchpanel output.

**Turn On the System**

To turn on the system, press any of the source buttons on the left-side of the button pad.

**NOTE:** Typically, signal routing information is not displayed on the front panel of the MPS-100. However, if an output button on the MPS-100 was pressed at any point during operation, routing information will be displayed and updated should any changes to routing be made.

**Turn Off the System**

To turn off the system, press the **POWER** button.

**Raise or Lower the Projection Screen**

To raise or lower the projection screen, press the **SCREEN** button. The front panel of the MPS-100 will also indicate the screen’s status.
Adjust the Volume Level

To raise the volume level, press the VOL UP button. To lower the volume, press the VOL DOWN button.

Mute Audio

To mute the audio output, press the MUTE button. To unmute, press the MUTE button again. The front panel of the MPS-100 will indicate the status of the mute function.

Adjust Lighting

To set lighting to one of two preset lighting values:

- Press the LIGHTS 1 button to set the lighting to preset level 1.
- Press the LIGHTS 2 button to set the lighting to preset level 2.

The front panel of the MPS-100 will indicate the selected preset light setting.

Control from a C2N-FTB

The following describes operation of the system when using the out-of-the-box functionality and a C2N-FTB FlipTop Control Center. If a custom program has been created, the MPS-100 may function differently.

NOTE: Buttons for the keypad are custom engraved using Crestron SystemBuilder software. For instructions on installing the buttons on the control center, refer to the control center’s guide.
The control center has 10 buttons as shown in the following diagram.

**C2N-FTB Buttons**

- POWER
- LIGHTS
- BNC 1
- RGBHV 4
- BNC 2
- RGBHV 5
- RGBHV 3
- VOL UP
- VOL DOWN
- RGBHV 5
- MUTE

**NOTE:** Custom buttons can be created using Crestron Engraver software. For instructions on installing the custom buttons, refer to the C2N-FTB guide.

When switching sources from the C2N-FTB, the MPS-100 will route the signal to the projector output and then route the signal to the touchpanel output.

---

**Turn On the System**

To turn on the system, press any of the source buttons on the control center.

**NOTE:** Typically, signal routing information is not displayed on the front panel of the MPS-100. However, if an output button on the MPS-100 was pressed at any point during operation, routing information will be displayed and updated should any changes to routing be made.

---

**Turn Off the MPS-100**

To turn off the system, press the **POWER** button.

---

**Adjust the Volume Level**

To raise the volume level, press the **VOL UP** button. To lower the volume, press the **VOL DOWN** button.

---

**Mute Audio**

To mute the audio output, press the **MUTE** button. To unmute, press the **MUTE** button again. The front panel of the MPS-100 will indicate the status of the mute function.

---

**Adjust Lighting**

To toggle between preset light settings, press the **LIGHTS** button. The front panel of the MPS-100 will indicate the selected preset light setting.
NOTE: This function will only work if a CLS-C6, infiNET switch, or infiNET dimmer was previously identified and connected to the MPS-100. The CLS-C6 can be identified as a Cresnet device in the MPS-100 setup screens as described on page 50. Crestron’s infiNET switches and dimmers require a C2N-MNETGW to be identified as described on page 50 in addition to identifying the individual switch and/or dimmer with a unique identity code (MNET ID) using Crestron Toolbox. CLW-DIM1RF and CLW-DIMS1RF dimmers use MNET IDs 03 and 04 while CLW-SW1RF and CLW-SWS1RF switches use MNET IDs 05 and 06. For information on identifying infiNET switches and dimmers, refer to the Crestron Toolbox help file.
# Problem Solving

## Troubleshooting

The following table provides corrective action for possible trouble situations. If further assistance is required, please contact a Crestron customer service representative.

### MPS-100 Troubleshooting

<table>
<thead>
<tr>
<th>TROUBLE</th>
<th>POSSIBLE CAUSE(S)</th>
<th>CORRECTIVE ACTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Unexpected response from control system.</td>
<td>Network devices are not communicating with the control system.</td>
<td>Use Crestron Toolbox to poll the network. Verify network connection to the device.</td>
</tr>
<tr>
<td>PWR LED does not illuminate.</td>
<td>Control system is not receiving power.</td>
<td>Verify the power cord is properly attached to the control system and securely plugged into an outlet.</td>
</tr>
<tr>
<td>MSG LED illuminates.</td>
<td>Hardware or software failure, hardware incompatibility with software definitions or programming error.</td>
<td>Verify that hardware configuration matches software configuration. Use Crestron Toolbox to display the error log. Refer to “Error Message Definitions” in the latest version of the Crestron 2-Series Control Systems Reference Guide (Doc. 6256) for more details.</td>
</tr>
<tr>
<td>System locks up.</td>
<td>Various.</td>
<td>Press and release front panel HW-R button, then press and hold SW-R button to bypass program and communicate directly with the processor. (Refer to “Troubleshooting Communications” in the Crestron 2-Series Control Systems Reference Guide (Doc. 6256) for more details.</td>
</tr>
<tr>
<td>Cresnet device does not respond.</td>
<td>Device not wired correctly.</td>
<td>Verify Cresnet wiring.</td>
</tr>
<tr>
<td>A/V system device does not respond.</td>
<td>Device is not receiving sufficient power.</td>
<td>User the Crestron Power Calculator to help calculate how much power is needed for the system.</td>
</tr>
<tr>
<td>Poor picture quality (RGB).</td>
<td>Cables improperly connected.</td>
<td>Verify that all cables are secure.</td>
</tr>
<tr>
<td></td>
<td>Display device not configured properly.</td>
<td>Configure display device to match output frequency.</td>
</tr>
<tr>
<td></td>
<td>Incorrect sync input impedance.</td>
<td>Set DIP switches to lower sync input impedance.</td>
</tr>
<tr>
<td>Poor picture quality (Video).</td>
<td>Cables improperly connected.</td>
<td>Verify that all cables are secure.</td>
</tr>
</tbody>
</table>
NOTE: If communication cannot be established or the control system is locked-up, refer to “Troubleshooting Communications” in the Crestron 2-Series Control Systems Reference Guide (Doc. 6256).

NOTE: Passthrough Mode enables Viewport access to any serial controlled device on the network. This aids in troubleshooting by allowing direct communication between the PC and a network device (effectively “passing through” the MPS-100). For information pertaining to Passthrough Mode, refer to “Passthrough Mode” in the Crestron 2-Series Control Systems Reference Guide (Doc. 6256).

System Monitor

The System Monitor allows you to reload firmware into the MPS-100 in the event that you cannot load the firmware in the normal mode.

If the system does not function, perform the following procedure:

1. Disconnect all Crestron USB devices from the PC.
2. On the MPS-100, press and release the HW-R button. The MSG LED will start blinking rapidly four times per second.
3. During the rapid blink of the MSG LED, press and release the SW-R button. This will put the MPS-100 into “Wait” mode for the next five seconds. During this mode the MSG LED will blink slowly, once per second.
4. During “Wait” mode, press and release the SW-R button again. The MPS-100 will now enter the “Wait Acknowledge” mode for the next five seconds. During this mode the MSG LED will blink rapidly four times per second.
5. During “Wait Acknowledge” mode, press and release the SW-R button a third time. The MPS-100 will enter “Monitor” mode. Once the MPS-100 is in “Monitor” mode, the MSG LED will flash to indicate “Monitor” mode. The display will also indicate the “Monitor Boot” mode.
6. Once the MPS-100 is in “Monitor” mode, connect to the PC using a USB cable.

NOTE: If at any point in the above sequence, one of the timer periods expires without the SW-R button being pressed, the unit will boot normally, first running the firmware, then loading the application.

NOTE: If your PC does not have the USB driver installed, after connecting the MPS-100 to the PC using the USB cable, you will see a dialog box on your PC screen asking you to install the USB driver. For instructions on how to install the USB driver, refer to the Crestron Toolbox help file.

7. Open Toolbox and start the Text Console (click the icon). Then, click on the Address Book icon in the lower left corner of the window to open the “Address Book” window.
8. In the “Address Book” window, click the “Add Entry” button and give the new entry a name (e.g. “System Monitor”).
9. Click the arrow next to the “Device Type” drop down list. A “Warning” window will open to inform you that this is an advanced feature. Click OK, then select “2-Series Control System Monitor” from the drop down list.
Make sure to choose USB as the “Connection Type”, then click OK. The following text will appear in the bottom right corner of the “Text Console” window:

```
usb;device 2SeriesCtrlSystemMonitor
```

The following text will appear in Toolbox:

```
MPSMNTR>
```

10. At the Toolbox prompt, type **erase** and press **Enter**. The following text will appear in Toolbox:

```
Erasing
->25%->50%->75%->100%
Done
```

11. Click the **Firmware** icon and select **Firmware...** to open the “Firmware” window, then click **Browse**.

12. Find and select the correct firmware file (.CUZ or .zip) and click **Open**.

13. In the “Firmware” window, click **Send**. You will see a “Confirmation” window asking if you’ve selected the right file. Click **OK** and you will see the “File Transfer” window.

14. When file transfer is completed, you will see a window asking you to re-connect. Click **OK**, then close the “Firmware” window and re-connect using the normal Address Book entry.

### Network Analysis

To assist with troubleshooting, you can use Crestron’s C2N-ANLZ Cresnet Analyzer (sold separately) to monitor the integrity of the Cresnet network for wiring faults and marginal system performance or other network errors. For more information on how to use the C2N-ANLZ, refer to the C2N-ANLZ Operations Guide (Doc. 6473).

### Battery Replacement

A Lithium battery is used to power the system clock within the MPS-100. Under normal conditions, it will last for approximately 10 years. In the event that the clock fails, only an authorized technician should replace it. Refer to caution statement below.

**CAUTION:** Danger of explosion if battery is incorrectly replaced.
Replace only with the same or equivalent type recommended by the manufacturer.
Dispose of used batteries according to the manufacturer’s instructions.

### Check Network Wiring

**Use the Right Wire**

In order to ensure optimum performance over the full range of your installation topology, Crestron Certified Wire and only Crestron Certified Wire may be used. Failure to do so may incur additional charges if support is required to identify performance deficiencies because of using improper wire.
**Calculate Power**

**CAUTION:** Use only Crestron power supplies for Crestron equipment. Failure to do so could cause equipment damage or void the Crestron warranty.

**CAUTION:** Provide sufficient power to the system. Insufficient power can lead to unpredictable results or damage to the equipment. Please use the Crestron Power Calculator to help calculate how much power is needed for the system ([http://www.crestron.com/calculators](http://www.crestron.com/calculators)).

When calculating the length of wire for a particular Cresnet run, the wire gauge and the Cresnet power usage of each network unit to be connected must be taken into consideration. Use Crestron Certified Wire only. If Cresnet units are to be daisy-chained on the run, the Cresnet power usage of each network unit to be daisy-chained must be added together to determine the Cresnet power usage of the entire chain. If the unit is home-run from a Crestron system power supply network port, the Cresnet power usage of that unit is the Cresnet power usage of the entire run. The wire gauge and the Cresnet power usage of the run should be used in the following equation to calculate the cable length value on the equation’s left side.

**Cable Length Equation**

\[ L < \frac{40,000}{R \times P} \]

Where:
- \( L \) = Length of run (or chain) in feet
- \( R \) = 6 Ohms (Crestron Certified Wire: 18 AWG (0.75 MM²))
  - or 1.6 Ohms (Cresnet HP: 12 AWG (4 MM²))
- \( P \) = Cresnet power usage of entire run (or chain)

Make sure the cable length value is less than the value calculated on the right side of the equation. For example, a Cresnet run using 18 AWG Crestron Certified Wire and drawing 20 watts should not have a length of run more than 333 feet. If Cresnet HP is used for the same run, its length could extend to 1250 feet.

**NOTE:** All Crestron certified Cresnet wiring must consist of two twisted pairs. One twisted pair is the +24V conductor and the GND conductor and the other twisted pair is the Y conductor and the Z conductor.

**Strip and Tin Wire**

When daisy-chaining Cresnet units, strip the ends of the wires carefully to avoid nicking the conductors. Twist together the ends of the wires that share a pin on the network connector and tin the twisted connection. Apply solder only to the ends of the twisted wires. Avoid tinning too far up the wires or the end becomes brittle. Insert the tinned connection into the Cresnet connector and tighten the retaining screw. Repeat the procedure for the other three conductors.

**Add Hubs**

For larger networks (i.e., greater than 28 network devices), it may become necessary to add a Cresnet Hub/Repeater (CNXHUB) to maintain signal quality throughout the network. Also, for networks with lengthy cable runs it may be necessary to add a Hub/Repeater after only 20 devices.

**Reference Documents**

The latest version of all documents mentioned within the guide can be obtained from the Crestron website ([http://www.crestron.com/manuals](http://www.crestron.com/manuals)). This link will provide a list of product manuals arranged in alphabetical order by model number.

Further Inquiries

If you cannot locate specific information or have questions after reviewing this guide, please take advantage of Crestron’s award winning customer service team by calling the Crestron corporate headquarters at 1-888-CRESTRON [1-888-273-7876]. For assistance in your local time zone, refer to the Crestron website ([http://www.crestron.com/](http://www.crestron.com/)) for a listing of Crestron worldwide offices.

You can also log onto the online help section of the Crestron website to ask questions about Crestron products. First-time users will need to establish a user account to fully benefit from all available features.

Future Updates

As Crestron improves functions, adds new features and extends the capabilities of the MPS-100, additional information may be made available as manual updates. These updates are solely electronic and serve as intermediary supplements prior to the release of a complete technical documentation revision.

Check the Crestron website periodically for manual update availability and its relevance. Updates are identified as an “Addendum” in the Download column.
Software License Agreement

This License Agreement ("Agreement") is a legal contract between you (either an individual or a single business entity) and Crestron Electronics, Inc. ("Crestron") for software referenced in this guide, which includes computer software and as applicable, associated media, printed materials and "online" or electronic documentation (the "Software").

BY INSTALLING, COPYING OR OTHERWISE USING THE SOFTWARE, YOU REPRESENT THAT YOU ARE AN AUTHORIZED DEALER OF CRESTRON PRODUCTS OR A CRESTRON AUTHORIZED INDEPENDENT PROGRAMMER AND YOU AGREE TO BE BOUND BY THE TERMS OF THIS AGREEMENT. IF YOU DO NOT AGREE TO THE TERMS OF THIS AGREEMENT, DO NOT INSTALL OR USE THE SOFTWARE.

IF YOU HAVE PAID A FEE FOR THIS LICENSE AND DO NOT ACCEPT THE TERMS OF THIS AGREEMENT, CRESTRON WILL REFUND THE FEE TO YOU PROVIDED (1) CLICK THE DO NOT ACCEPT BUTTON, (2) DO NOT INSTALL THE SOFTWARE AND (3) RETURN ALL SOFTWARE, MEDIA AND OTHER DOCUMENTATION AND MATERIALS PROVIDED WITH THE SOFTWARE TO CRESTRON AT: CRESTRON ELECTRONICS, INC., 15 VOLVO DRIVE, ROCKLEIGH, NEW JERSEY 07647, WITHIN 30 DAYS OF PAYMENT.

LICENSE TERMS

Crestron hereby grants You and You accept a nonexclusive, nontransferable license to use the Software (a) in machine readable object code together with the related explanatory written materials provided by Crestron (b) on a central processing unit ("CPU") owned or leased or otherwise controlled exclusively by You and (c) only as authorized in this Agreement and the related explanatory files and written materials provided by Crestron.

If this software requires payment for a license, you may make one backup copy of the Software, provided Your backup copy is not installed or used on any CPU. You may not transfer the rights of this Agreement to a backup copy unless the installed copy of the Software is destroyed or otherwise inoperable and You transfer all rights in the Software.

You may not transfer the license granted pursuant to this Agreement or assign this Agreement without the express written consent of Crestron.

If this software requires payment for a license, the total number of CPU's on which all versions of the Software are installed may not exceed one per license fee (1) and no concurrent, server or network use of the Software (including any permitted back-up copies) is permitted, including but not limited to using the Software (a) either directly or through commands, data or instructions from or to another computer (b) for local, campus or wide area network, internet or web hosting services or (c) pursuant to any rental, sharing or "service bureau" arrangement.

The Software is designed as a software development and customization tool. As such Crestron cannot and does not guarantee any results of use of the Software or that the Software will operate error free and You acknowledge that any development that You perform using the Software or Host Application is done entirely at Your own risk.

The Software is licensed and not sold. Crestron retains ownership of the Software and all copies of the Software and reserves all rights not expressly granted in writing.

OTHER LIMITATIONS

You must be an Authorized Dealer of Crestron products or a Crestron Authorized Independent Programmer to install or use the Software. If Your status as a Crestron Authorized Dealer or Crestron Authorized Independent Programmer is terminated, Your license is also terminated.

You may not rent, lease, lend, sublicense, distribute or otherwise transfer or assign any interest in or to the Software.

You may not reverse engineer, decompile or disassemble the Software.

You agree that the Software will not be shipped, transferred or exported into any country or used in any manner prohibited by the United States Export Administration Act or any other export laws, restrictions or regulations ("Export Laws"). By downloading or installing the Software You (a) are certifying that You are not a national of Cuba, Iran, Iraq, Libya, North Korea, Sudan, Syria or any country to which the United States embargoes goods (b) are certifying that You are not otherwise prohibited from receiving the Software and (c) You agree to comply with the Export Laws.

If any part of this Agreement is found void and unenforceable, it will not affect the validity of the balance of the Agreement, which shall remain valid and enforceable according to its terms. This Agreement may only be modified by a writing signed by an authorized officer of Crestron. Updates may be licensed to You by Crestron with additional or different terms. This is the entire agreement between Crestron and You relating to the Software and it supersedes any prior representations, discussions, undertakings, communications or advertising relating to the Software. The failure of either party to enforce any right or take any action in the event of a breach hereunder shall constitute a waiver unless expressly acknowledged and set forth in writing by the party alleged to have provided such waiver.
If you are a business or organization, you agree that upon request from Crestron or its authorized agent, you will within thirty (30) days fully document and certify that use of any and all Software at the time of the request is in conformity with your valid licenses from Crestron or its authorized agent.

Without prejudice to any other rights, Crestron may terminate this Agreement immediately upon notice if you fail to comply with the terms and conditions of this Agreement. In such event, you must destroy all copies of the Software and all of its component parts.

**PROPRIETARY RIGHTS**

Copyright. All title and copyrights in and to the Software (including, without limitation, any images, photographs, animations, video, audio, music, text and “applets” incorporated into the Software), the accompanying media and printed materials and any copies of the Software are owned by Crestron or its suppliers. The Software is protected by copyright laws and international treaty provisions. Therefore, you must treat the Software like any other copyrighted material, subject to the provisions of this Agreement.

Submissions. Should you decide to transmit to Crestron’s website by any means or by any media any materials or other information (including, without limitation, ideas, concepts or techniques for new or improved services and products), whether as information, feedback, data, questions, comments, suggestions or the like, you agree such submissions are unrestricted and shall be deemed non-confidential and you automatically grant Crestron and its assigns a non-exclusive, royalty-free, worldwide, perpetual, irrevocable license, with the right to sublicense, to use, copy, transmit, distribute, create derivative works of, display and perform the same.

Trademarks. CRESTRON and the Swirl Logo are registered trademarks of Crestron Electronics, Inc. You shall not remove or conceal any trademark or proprietary notice of Crestron from the Software including any back-up copy.

**GOVERNING LAW**

This Agreement shall be governed by the laws of the State of New Jersey, without regard to conflicts of laws principles. Any disputes between the parties to the Agreement shall be brought in the state courts in Bergen County, New Jersey or the federal courts located in the District of New Jersey. The United Nations Convention on Contracts for the International Sale of Goods shall not apply to this Agreement.

**CRESTRON LIMITED WARRANTY**

CRESTRON warrants that: (a) the Software will perform substantially in accordance with the published specifications for a period of ninety (90) days from the date of receipt and (b) that any hardware accompanying the Software will be subject to its own limited warranty as stated in its accompanying written material. Crestron shall, at its option, repair or replace or refund the license fee for any Software found defective by Crestron if notified by you within the warranty period. The foregoing remedy shall be your exclusive remedy for any claim or loss arising from the Software.

CRESTRON shall not be liable to honor warranty terms if the product has been used in any application other than that for which it was intended or if it has been subject to misuse, accidental damage, modification or improper installation procedures. Furthermore, this warranty does not cover any product that has had the serial number or license code altered, defaced, improperly obtained or removed.

Notwithstanding any agreement to maintain or correct errors or defects, Crestron shall have no obligation to service or correct any error or defect that is not reproducible by Crestron or is deemed in Crestron’s reasonable discretion to have resulted from (1) accident; unusual stress; neglect; misuse; failure of electric power, operation of the Software with other media not meeting or not maintained in accordance with the manufacturer’s specifications or causes other than ordinary use; (2) improper installation by anyone other than Crestron or its authorized agents of the Software that deviates from any operating procedures established by Crestron in the material and files provided to You by Crestron or its authorized agent; (3) use of the Software on unauthorized hardware or (4) modification of, alteration of or additions to the Software undertaken by persons other than Crestron or Crestron’s authorized agents.

ANY LIABILITY OF CRESTRON FOR A DEFECTIVE COPY OF THE SOFTWARE WILL BE LIMITED EXCLUSIVELY TO REPAIR OR REPLACEMENT OF YOUR COPY OF THE SOFTWARE WITH ANOTHER COPY OR REFUND OF THE INITIAL LICENSE FEE CRESTRON RECEIVED FROM YOU FOR THE DEFECTIVE COPY OF THE PRODUCT. THIS WARRANTY SHALL BE THE SOLE AND EXCLUSIVE REMEDY TO YOU. IN NO EVENT SHALL CRESTRON BE LIABLE FOR INCIDENTAL, CONSEQUENTIAL, SPECIAL OR PUNITIVE DAMAGES OF ANY KIND (PROPERTY OR ECONOMIC DAMAGES INCLUSIVE), EVEN IF A CRESTRON REPRESENTATIVE HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES OR OF ANY CLAIM BY ANY THIRD PARTY. CRESTRON MAKES NO WARRANTIES, EXPRESS OR IMPLIED, AS TO TITLE OR INFRINGEMENT OF THIRD-PARTY RIGHTS, MERCHANTABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE, OR ANY OTHER WARRANTIES, NOR AUTHORIZES ANY OTHER PARTY TO OFFER ANY WARRANTIES, INCLUDING WARRANTIES OF MERCHANTABILITY FOR THIS PRODUCT. THIS WARRANTY STATEMENT SUPERSEDES ALL PREVIOUS WARRANTIES.
Return and Warranty Policies

Merchandise Returns / Repair Service

1. No merchandise may be returned for credit, exchange or service without prior authorization from CRESTRON. To obtain warranty service for CRESTRON products, contact an authorized CRESTRON dealer. Only authorized CRESTRON dealers may contact the factory and request an RMA (Return Merchandise Authorization) number. Enclose a note specifying the nature of the problem, name and phone number of contact person, RMA number and return address.

2. Products may be returned for credit, exchange or service with a CRESTRON Return Merchandise Authorization (RMA) number. Authorized returns must be shipped freight prepaid to CRESTRON, 6 Volvo Drive, Rockleigh, N.J. or its authorized subsidiaries, with RMA number clearly marked on the outside of all cartons. Shipments arriving freight collect or without an RMA number shall be subject to refusal. CRESTRON reserves the right in its sole and absolute discretion to charge a 15% restocking fee plus shipping costs on any products returned with an RMA.

3. Return freight charges following repair of items under warranty shall be paid by CRESTRON, shipping by standard ground carrier. In the event repairs are found to be non-warranty, return freight costs shall be paid by the purchaser.

CRESTRON Limited Warranty

CRESTRON ELECTRONICS, Inc. warrants its products to be free from manufacturing defects in materials and workmanship under normal use for a period of three (3) years from the date of purchase from CRESTRON, with the following exceptions: disk drives and any other moving or rotating mechanical parts, pan/tilt heads and power supplies are covered for a period of one (1) year; touchscreen display and overlay components are covered for 90 days; batteries and incandescent lamps are not covered.

This warranty extends to products purchased directly from CRESTRON or an authorized CRESTRON dealer. Purchasers should inquire of the dealer regarding the nature and extent of the dealer’s warranty, if any.

CRESTRON shall not be liable to honor the terms of this warranty if the product has been used in any application other than that for which it was intended or if it has been subjected to misuse, accidental damage, modification or improper installation procedures. Furthermore, this warranty does not cover any product that has had the serial number altered, defaced or removed.

This warranty shall be the sole and exclusive remedy to the original purchaser. In no event shall CRESTRON be liable for incidental or consequential damages of any kind (property or economic damages inclusive) arising from the sale or use of this equipment. CRESTRON is not liable for any claim made by a third party or made by the purchaser for a third party.

CRESTRON shall, at its option, repair or replace any product found defective, without charge for parts or labor. Repaired or replaced equipment and parts supplied under this warranty shall be covered only by the unexpired portion of the warranty.

Except as expressly set forth in this warranty, CRESTRON makes no other warranties, expressed or implied, nor authorizes any other party to offer any warranty, including any implied warranties of merchantability or fitness for a particular purpose. Any implied warranties that may be imposed by law are limited to the terms of this limited warranty. This warranty statement supersedes all previous warranties.
