

# High-End Automation Delivers High Impact on Guests Castle Pines, CO

## The challenge

Integrate a whole home automation system with high-impact AV for entertainment in a huge space with challenging acoustics, including ceilings as high as 30 feet and many stone and wood surfaces.

## The solution

Collaborate with the homeowner to create an incredibly easy-to-use control system with high-end, whole house audio and a pro audio line array experience.

## Introduction

Ease of use and a whole home pro audio experience were of paramount importance to the client in this 14,000 square foot home located on 90 acres of land in Castle Pines, Colorado. He wanted a system that would make a huge impact on his guests when he hosts fundraisers and special events. To accomplish this, all lighting, audio, video, and security, from the guesthouse and pool house, to the garages that house the client's luxury automobiles, were fully automated with Crestron through one simple interface.

## Technology

The client wanted his home automation system to perform a variety of advanced functions without being overly complicated. Having all the technology blend seamlessly into the space and complement the modern décor was a high priority, as well as having the technology inside the home also available outdoors including in the pool area. Denver based Logic Integration built the system on Crestron technology to create an incredibly easy-to-use system with AV, lighting, and security control throughout the home.

One of the key features of the project is the custom user interface, designed with the client's specific needs in mind. Everything is easily controllable system from Crestron touch screens throughout the home, and from an iPad®.

## Results

With the help of Logic Integration, this Colorado homeowner was able to seamlessly integrate state-of-the-art Crestron automation and control technology to create a stunningly intelligent home for entertaining.

The client was so pleased with the quality and functionality of the system that he worked with Logic to outfit three of his other homes with Crestron based systems.
