

Crestron Construct | Design Ideas

Sample Projects Guide

Device Type: N/A

Connection: N/A

Processor: 3/4-Series

Overview

The Crestron Construct Design Ideas templates are a group of sample projects. Each sample project contains a Crestron Construct™ user interface project, as well as a SIMPL Windows® program.

The projects are designed to complement the various rooms designs located on the Design Ideas website: <https://www.crestron.com/Products/Featured-Solutions/Design-Ideas>.

Note: When importing Crestron Constructs project archives using macOS, the included custom theme and font files in the archive must be manually extracted and placed into the Themes and Webfonts folders. This is a known issue within the Crestron Construct application.

Version History

Version 1.0.1 May 1st, 2026

New features:

- Initial Release of the Advanced Template
- Initial Release of the Auditorium Template
- Initial Release of the Classroom Template
- Initial Release of the BYOD NIPR/SIPR Template
- Initial Release of the Training Room Template

Fixed issues:

- Adjusted components to remove the out-of-bounds warning messages.

Known issues:

- None.

Version 1.0.0 March 31st, 2026

New features:

- Initial Release of the Basic Template

Known issues:

- Object out-of-bound warnings are shown during user interface compilation. This is a known issue within Construct where invalid out-of-bounds warnings are shown during a project compile. These can be ignored when using the Design Ideas sample projects.
