

Extend control to any room without using wires

infiNET EX® Wireless Control Modules

Using our powerful infiNET EX® wireless technology, INET-IOEX Control Modules provide a cost-effective way to extend control to a wide variety of third-party devices in any room - even outdoor spaces. Control all your IR, serial, and relay devices wirelessly over long distances without opening walls or trenching the backyard.

Extend Control

Deliver a dependable wireless control solution in environments where pulling cable is not practical or desired; or when you're looking to reduce wiring and related labor costs of traditional wired installations.

1. residential and commercial retrofits
2. pool areas, patios, and gazebos
3. custom stone work or brick walls
4. historic buildings
5. long distances (up to 150')
6. other hard to reach spaces

How it works

Using either or both modules, serial, IR, and relay devices communicate wirelessly with a Crestron control system over the infiNET EX wireless mesh network. The device can then be controlled from any Crestron touch screen, keypad, remote, or from any Apple® or Android™ smart device.

Easy installation

IOEX modules offer huge time savings, simplifying system design and installation. About the size of a deck of cards, each module can be mounted discreetly behind a display, or inconspicuously on a wall near the desired device. IOEX modules also function as expanders, passing command signals to every other infiNET EX device within its approximately 150 foot range.

Actual Size

INET-IOEX-IRCOM - Features one RS-232 and two IR control ports. Enables long distance wireless communication between Crestron 3-Series™ control systems and devices such as TVs, cable boxes, displays, projector screens, AV components, switchers, and other equipment that is controllable using basic serial or IR commands.

Actual Size

INET-IOEX-RYIO - Features two isolated relays and two digital input ports. Provides a wireless control interface for remote devices such as garage door openers, sensors, motorized screens, and other relay-controlled devices.

Extend control quickly, easily, and affordably
