Controls up to 250 objects on a KNX network

Ethernet control

No polling necessary - sends live updates

Capable of addressing and controlling separate KNX objects

The Crestron® CI-KNX is a bi-directional Ethernet interface to a KNX/EIB network. It is capable of addressing and controlling up to 250 KNX/EIB objects. The CI-KNX contains a TCP/IP port for communication and Power-over-Ethernet (PoE). Easy programming using ETS (KNX/EIB) programming software makes it ideal for small EIB/KNX installations while maintaining scalability for bigger projects.
