# YOUR AV SYSTEM IS ONLY AS STRONG AS ITS **WEAKEST LINK**

Eliminate weak links.

Combining different manufacturers' products and platforms that weren't engineered to work together compromises AV system performance. This traditional multi-platform ad hoc approach makes digital video distribution unreliable and introduces unnecessary problems. Avoid weak links. With a Crestron Certified Design you get:

› A single point of responsibility for system performance

› All devices and rooms can be managed on the network – complete visibility

› Every room is implemented consistently and works the same, so they're easy to use and support

› System specifications are documented, centralized, and transparent to all knowledge workers

Built on a single, scalable, and validated IP-based platform, only Crestron gives your customers the ability to meet the highest IT standards for enterprise AV.

Insist on a Crestron Certified Design.
