

# HD-XSP

## 7.1 High-Definition Professional Surround Sound Processor

Finally, a true 7.1 surround sound processor for conference rooms, auditoriums, classrooms, and any other space where professional quality surround sound is preferred

Designed to deliver theater-quality audio in today's digital rooms, our new [HD-XSP 7.1 HD Professional Surround Sound Processor](#) packs the latest 7.1 digital audio features into a compact rackmount footprint. The result is a professional quality surround sound experience that won't bleed your budget dry.

When you choose the HD-XSP, you'll get...

### True 7.1 Surround Sound

Featuring HDMI® in/out, HD-XSP handles true high-definition 7.1 digital surround sound and HDCP protected content without worry. Eight channels out (balanced line-level outputs) can drive a multichannel power amp that feeds seven speakers and a subwoofer. And, HD-XSP supports the most advanced high-definition audio available including Dolby® TrueHD, DTS-HD Master Audio™, and Dolby Digital® Plus.

Make your presentation stand out by filling the room with full, clear, intelligible audio. Gain the attention of your audience and engage them more effectively. HD-XSP is an essential component of a professional conference or meeting space in any corporate, educational, hospitality or government presentation space.

## Mix-in/out capability

Rescue your rooms, and your people, from poor sound quality once and for all...

HD-XSP enables easy integration with AV and VTC systems by combining a stereo Mix Input signal, from mixers and codecs, with the surround sound signal. The built-in downmix output offers added versatility by providing audio for two separate audiences simultaneously. In the conference room, listen to the 7.1 surround sound system. In addition, you can send the 2-channel stereo downmix output for videoconferencing applications, or over the mono output channel for telephone conference calls.

HD-XSP also integrates easily with our DMPS-300-AEC presentation system so you can add a stereo downmix of the surround sound program to a DMPS-powered conference room. Through DMPS you can combine 6 mic inputs into HD-XSP and expand the number and variety of program inputs

The mix in/out feature eliminates the need for external line mixers, reducing cost and rack space requirements.
