

CLT-1FAN4

Terminal Block for CLX-1FAN4

The CLT terminal blocks are designed to install in **CAEN** automation enclosures to facilitate the termination of Class 1 high-voltage wiring for each CLX-Series lighting control module. The color-coded DIN rail design, complete with printed label strips and mounting hardware, provides for a clean and simple installation. Electrical bypass jumpers on each terminal facilitate testing of each circuit and protect the module during installation. Each CLT terminal block assembly weighs approximately 0.5 lb (0.23 kg).
